Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Chapter 1. Introduction -- Part I: Burden of chronic disease -- Chapter 2. Deaths and burden of chronic disease in Europe -- Chapter 3. Economic consequences of chronic disease -- Part II: Strategies for tackling chronic disease -- Chapter 4. Strategies against chronic diseases: what is being done? -- Chapter 5. Effectiveness of strategies against chronic disease -- Chapter 6. Cost-effectiveness of strategies against chronic disease -- Part III: Challenges of chronic disease management -- Chapter 7. Tackling the challenges of chronic disease in Europe -- Chapter 8. Conclusions.
Sommario/riassunto	Chronic conditions and diseases are the leading cause of mortality and morbidity in Europe, accounting for 86% of total premature deaths, and the burden is likely to grow. The epidemiologic and economic analysis in this book suggests that policy-makers should make chronic disease a priority and focuses on the strategies and interventions to use: prevention and early detection; new provider qualifications and settings; disease management programmes; and integrated care models, though evidence on their effectiveness and cost-effectiveness is still limited. Institutional and organizational challenges are also explored and key policy recommendations made as to how to tackle them successfully.
