

1. Record Nr.	UNINA9910822951103321
Titolo	Antibiotics : targets, mechanisms and resistance // edited by Claudio O. Gualerzi [and three others]
Pubbl/distr/stampa	Weinheim : , : Wiley-VCH, , 2013
ISBN	9783527659708 3527659706 9783527659685 3527659684 9783527659715 3527659714
Edizione	[1st ed.]
Descrizione fisica	1 online resource (575 p.)
Altri autori (Persone)	GualerziClaudio O. <1942->
Disciplina	615.329
Soggetti	Antibiotics Anti-infective agents
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Title Page; Copyright; Contents; Preface; List of Contributors; Chapter 1 A Chemist's Survey of Different Antibiotic Classes; 1.1 Introduction; 1.2 Aminoglycosides; 1.3 -Lactams; 1.4 Linear Peptides; 1.4.1 Glycopeptides-Dalbaheptides; 1.4.2 Lantibiotics; 1.5 Cyclic Peptides; 1.6 Thiazolylpeptides; 1.7 Macrolactones; 1.7.1 Macrolides; 1.7.2 Difimicin; 1.8 Ansamycins-Rifamycins; 1.9 Tetracyclines; 1.10 Oxazolidinones; 1.11 Lincosamides; 1.12 Pleuromutilins; 1.13 Quinolones; 1.14 Aminocoumarins; References; Chapter 2 Antibacterial Discovery: Problems and Possibilities; 2.1 Introduction 2.2 Why Is Antibacterial Discovery Difficult? The Problems2.3 Target Choice: Essentiality; 2.4 Target Choice: Resistance; 2.5 Cell Entry; 2.6 Screening Strategies; 2.6.1 Empirical Screens; 2.6.2 Phenotypic Whole-Cell Screens; 2.6.3 In Vitro Screens for Single-Target Inhibitors; 2.6.4 Chemicals to Screen; 2.6.4.1 Chemical Collections; 2.7 Natural Products; 2.8 Computational Chemistry, Virtual Screening, Structure- and Fragment-Based Drug Design (SBDD and FBDD); 2.9 Conclusions; References; Chapter 3 Impact of Microbial Natural Products on

Antibacterial Drug Discovery; 3.1 Introduction
 3.2 Natural Products for Drug Discovery
 3.3 Microbial Natural Products;
 3.4 The Challenge of Finding Novel Antibiotics from New Natural
 Sources; 3.5 Workflow for Drug Discovery from Microbial Natural
 Products; 3.6 Antimicrobial Activities: Targets for Screens; 3.7 Natural
 Products: A Continuing Source for Inspiration; 3.8 Genome Mining in
 Natural Product Discovery; 3.9 Conclusions; References; Chapter 4
 Antibiotics and Resistance: A Fatal Attraction; 4.1 To Be or Not to Be
 Resistant: Why and How Antibiotic Resistance Mechanisms Develop and
 Spread among Bacteria
 4.1.1 Horizontal and Vertical Transmission of Resistance Genes
 4.2 Bacterial Resistance to Antibiotics by Enzymatic Degradation or
 Modification; 4.2.1 Antibiotic Resistance by Hydrolytic Enzymes; 4.2.1.1
 β -Lactamases; 4.2.1.2 Macrolide Esterases; 4.2.1.3 Epoxidases;
 4.2.1.4 Proteases; 4.2.2 Antibiotic Transferases Prevent Target
 Recognition; 4.2.2.1 Acyltransfer; 4.2.2.2 Phosphotransferases; 4.2.2.3
 Nucleotidyltransferases; 4.2.2.4 ADP-Ribosyltransferases; 4.2.2.5
 Glycosyltransferases; 4.2.3 Redox Enzymes; 4.3 Antibiotic Target
 Alteration: The Trick Exists and It Is in the Genetics
 4.3.1 Low-Affinity Homologous Genes
 4.3.1.1 Rifamycin Low-Affinity
 RpoB; 4.3.1.2 Mutated Genes Conferring Resistance to Quinolone,
 Fluoroquinolone and Aminocoumarins; 4.3.1.3 PBP2a: A Low-Affinity
 Penicillin-Binding Protein; 4.3.1.4 Dihydropteroate Synthases Not
 Inhibited by Sulfonamide; 4.3.2 Chemical Modification of Antibiotic
 Target; 4.3.2.1 23S rRNA Modification; 4.3.2.2 16S rRNA Modification;
 4.3.2.3 Reprogramming Chemical Composition of a Bacterial Cell-Wall
 Precursor; 4.3.3 Ribosomal Protection and Tetracycline Resistance
 4.3.4 Chromosomal Mutations in Genes Required for Membrane
 Phospholipid Metabolism: Lipopeptide Resistance

Sommario/riassunto

Most of the antibiotics now in use have been discovered more or less by chance, and their mechanisms of action have only been elucidated after their discovery. To meet the medical need for next-generation antibiotics, a more rational approach to antibiotic development is clearly needed. Opening with a general introduction about antimicrobial drugs, their targets and the problem of antibiotic resistance, this reference systematically covers currently known antibiotic classes, their molecular mechanisms and the targets on which they act. Novel targets such as cell signaling networks, ribo
