

1. Record Nr.	UNINA9910823072003321
Autore	Magoules F (Frederic)
Titolo	Parallel scientific computing // Frederic Magoules, Francois-Xavier Roux, Guillaume Houzeaux
Pubbl/distr/stampa	London, England ; ; Hoboken, New Jersey : , : ISTE : , : Wiley, , 2016 ©2016
ISBN	1-118-76172-3 1-118-76171-5
Descrizione fisica	1 online resource (287 p.)
Disciplina	004/.35
Soggetti	Parallel processing (Electronic computers) - Industrial applications Parallel algorithms - Industrial applications Industrial engineering - Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Table of Contents; Title; Copyright; Preface; Introduction; 1 Computer Architectures; 1.1. Different types of parallelism; 1.2. Memory architecture; 1.3. Hybrid architecture; 2 Parallelization and Programming Models; 2.1. Parallelization; 2.2. Performance criteria; 2.3. Data parallelism; 2.4. Vectorization: a case study; 2.5. Message-passing; 2.6. Performance analysis; 3 Parallel Algorithm Concepts; 3.1. Parallel algorithms for recurrences; 3.2. Data locality and distribution: product of matrices; 4 Basics of Numerical Matrix Analysis; 4.1. Review of basic notions of linear algebra 4.2. Properties of matrices 5 Sparse Matrices; 5.1. Origins of sparse matrices; 5.2. Parallel formation of sparse matrices: shared memory; 5.3. Parallel formation by block of sparse matrices: distributed memory; 6 Solving Linear Systems; 6.1. Direct methods; 6.2. Iterative methods; 7 LU Methods for Solving Linear Systems; 7.1. Principle of LU decomposition; 7.2. Gauss factorization; 7.3. Gauss-Jordan factorization; 7.4. Crout and Cholesky factorizations for symmetric matrices; 8 Parallelization of LU Methods for Dense Matrices; 8.1. Block factorization 8.2. Implementation of block factorization in a message-passing

environment
8.3. Parallelization of forward and backward substitutions;
9 LU Methods for Sparse Matrices; 9.1. Structure of factorized matrices;
9.2. Symbolic factorization and renumbering; 9.3. Elimination trees;
9.4. Elimination trees and dependencies; 9.5. Nested dissections; 9.6.
Forward and backward substitutions; 10 Basics of Krylov Subspaces;
10.1. Krylov subspaces; 10.2. Construction of the Arnoldi basis; 11
Methods with Complete Orthogonalization for Symmetric Positive
Definite Matrices
11.1. Construction of the Lanczos basis for symmetric matrices
11.2. The Lanczos method; 11.3. The conjugate gradient method; 11.4.
Comparison with the gradient method; 11.5. Principle of
preconditioning for symmetric positive definite matrices; 12 Exact
Orthogonalization Methods for Arbitrary Matrices; 12.1. The GMRES
method; 12.2. The case of symmetric matrices: the MINRES method;
12.3. The ORTHODIR method; 12.4. Principle of preconditioning for
non-symmetric matrices; 13 Biorthogonalization Methods for Non-
symmetric Matrices; 13.1. Lanczos biorthogonal basis for non-
symmetric matrices
13.2. The non-symmetric Lanczos method
13.3. The biconjugate
gradient method: BiCG; 13.4. The quasi-minimal residual method:
QMR; 13.5. The BiCGSTAB; 14 Parallelization of Krylov Methods; 14.1.
Parallelization of dense matrix-vector product; 14.2. Parallelization of
sparse matrix-vector product based on node sets; 14.3. Parallelization
of sparse matrix-vector product based on element sets; 14.4.
Parallelization of the scalar product; 14.5. Summary of the
parallelization of Krylov methods; 15 Parallel Preconditioning Methods;
15.1. Diagonal; 15.2. Incomplete factorization methods
15.3. Schur complement method
