

1. Record Nr.	UNINA9910823280903321
Titolo	Climate change impacts on freshwater ecosystems [[electronic resource] /] / edited by Martin Kernan, Rick Battarbee and Brian Moss
Pubbl/distr/stampa	Hoboken, NJ, : Wiley-Blackwell, 2010
ISBN	1-282-77460-3 9786612774607 1-4443-2739-9 1-4443-2740-2
Descrizione fisica	1 online resource (330 p.)
Altri autori (Persone)	KernanM. R BattarbeeR. W MossBrian <1943->
Disciplina	577.6/22
Soggetti	Freshwater habitats Freshwater ecology Climatic changes - Environmental aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Climate Change Impacts on Freshwater Ecosystems; Contents; Preface; Acknowledgements; Contributors; 1 Introduction; 2 Aquatic Ecosystem Variability and Climate Change - A Palaeoecological Perspective; 3 Direct Impacts of Climate Change on Freshwater Ecosystems; 4 Climate Change and the Hydrology and Morphology of Freshwater Ecosystems; 5 Monitoring the Responses of Freshwater Ecosystems to Climate Change; 6 Interaction of Climate Change and Eutrophication; 7 Interaction of Climate Change and Acid Deposition 8 Distribution of Persistent Organic Pollutants and Mercury in Freshwater Ecosystems Under Changing Climate Conditions 9 Climate Change: Defining Reference Conditions and Restoring Freshwater Ecosystems; 10 Modelling Catchment-Scale Responses to Climate Change; 11 Tools for Better Decision Making: Bridges from Science to Policy; 12 What of the Future?; Index
Sommario/riassunto	This text examines the impact of climate change on freshwater ecosystems, past, present and future. It especially considers the

interactions between climate change and other drivers of change including hydromorphological modification, nutrient loading, acid deposition and contamination by toxic substances using evidence from palaeolimnology, time-series analysis, space-for-time substitution, laboratory and field experiments and process modelling. The book evaluates these processes in relation to extreme events, seasonal changes in ecosystems, trends over decadal-scale time periods, mitigation
