Sommario/riassunto	Emergence - the process by which new and coherent structures, patterns and properties 'emerge' from within complex systemsTraditional architecture starts from the premise that architectural structures are singular and fixed, and however well integrated are separate from their environment and context. Emergence requires that the opposite is true - that those structures are complex energy and material systems that have a lifespan, exist as part of an environment of other active systems, and develop in an evolutionary way.This book, based on the authors' internati
