Sommario/riassunto	<p>Catalyst deactivation, the loss over time of catalytic activity and/or selectivity, is a problem of great and continuing concern in the practice of industrial catalytic processes. Costs to industry for catalyst replacement and process shutdown total tens of billions of dollars per year. While catalyst deactivation is inevitable for most processes, some of its immediate, drastic consequences may be avoided, postponed, or even reversed. Accordingly, there is considerable motivation to better understand catalyst decay and regeneration. Indeed, the science of catalyst deactivation and regeneration has been developing rapidly as evidenced by the considerable literature addressing this topic, including 21,000 journal articles, presentations, reports, reviews, and books; and more than 29,000 patents for the period of 1980 to 2012. This developing science provides the foundation for continuing, substantial improvements in the efficiency and economics of catalytic processes through development of catalyst deactivation models, more stable catalysts, and regeneration processes. This special issue focuses on recent advances in catalyst deactivation and regeneration, including advances in (1) scientific understanding of mechanisms; (2) development of improved methods and tools for investigation; and (3) more robust models of deactivation and regeneration.</p>

Sommario/riassunto	This book provides relevant and timing information addressing a significant aspect of the economic, political, and social transition in Central and Eastern Europe (CEE) over the last several decades, integrating historical data with the most recent political and economic reporting based on the author's analysis. Analysis include assessments, opinions, and experience (where appropriate) as scholars, researchers, consultants, and global citizens, from an introduction to the historical context for European integration, including the political structures and economic relationships forged in the post-World War II period, to the relationship between the European Union and the economies of states in CEE, examining the political, economic, and security considerations that complicated the federalist relationship in each state, and end with a brief discussion of the adoption of the euro. This book also discusses the economic impact of integration of CEE countries as they attempt to make their economic transition and to integrate with the European Union and other free-market economies. The authors look at the economic growth and challenges these countries face, as well as how

the indebtedness of the advanced economies are impacting these economies and prompting them to launch economic countermeasure to protect their own economies.
