

1. Record Nr.	UNINA9910824228103321
Autore	Manoel Edson
Titolo	End-to-end automation with IBM Tivoli System Automation for Multiplatforms // Edson Manoel ... [et. al.]
Pubbl/distr/stampa	White Plains, N.Y., : IBM, c2005
Descrizione fisica	1 online resource (296 p.)
Collana	Redbooks
Disciplina	004.36
Soggetti	Computer systems - Management Electronic data processing - Distributed processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"November 2005." "This edition applies to IBM Tivoli System Automation for Multiplatforms V2.1 and IBM Tivoli System Automation for z/OS V3.1." Includes bibliographical references and index.
Nota di bibliografia	
Nota di contenuto	Front cover -- Contents -- Figures -- Tables -- Examples -- Notices -- Trademarks -- Preface -- The team that wrote this redbook -- Become a published author -- Comments welcome -- Part 1 Fundamentals -- Chapter 1. IBM Tivoli System Automation for Multiplatforms V2.1 -- 1.1 IBM Tivoli System Automation for Multiplatforms V2.1 overview -- 1.1.1 Main features -- 1.2 Base Component overview -- 1.2.1 Reliable Scalable Cluster Technology -- 1.2.2 Resource Managers -- 1.2.3 End-to-end Automation Adapter -- 1.3 End-to-end Automation Management Component overview -- 1.3.1 Automation Engine -- 1.3.2 End-to-end Automation Manager -- 1.3.3 Operations Console -- 1.3.4 Automation database -- 1.3.5 Automation policy -- 1.3.6 End-to-end Automation Adapter -- 1.4 Communication between end-to-end components -- 1.5 Concepts and terminology -- 1.5.1 High Availability and IBM Tivoli System Automation for Multiplatforms -- 1.5.2 Terms used in IBM Tivoli System Automation for Multiplatforms -- Chapter 2. IBM Tivoli System Automation for z/OS V3.1 -- 2.1 IBM Tivoli System Automation for z/OS V3.1 overview -- 2.2 What is new in IBM Tivoli System Automation for z/OS V3.1 -- 2.2.1 Enhancements to the Customization Dialog -- 2.2.2 IBM Tivoli OMEGAMON integration -- 2.2.3 GDPS Integration -- 2.2.4 IBM Tivoli System Automation for z/OS V3.1 End-to-end

Automation Adapter -- 2.3 Overview Planning for installation -- Part 2
Case study scenario implementation -- Chapter 3. Case study scenario overview -- 3.1 Scenario overview -- Chapter 4. Case study scenario: HTTP Servers on Linux first-level automation domain -- 4.1 Apache automation domain overview -- 4.1.1 Installation -- 4.1.2 Automation requirements -- 4.2 Automation domain configuration -- 4.2.1 Create the first-level automation domain -- 4.2.2 Define resources in the automation domain.
4.2.3 Create the automation policy using relationship definitions --
4.2.4 Change the operational state of the resource group -- 4.2.5 Configuration error and recovery example -- 4.2.6 Exercising the automation policy example -- 4.3 End-to-end Automation Adapter configuration -- 4.3.1 Configure the End-to-end Automation Adapter -- 4.3.2 Replicate configuration files to nodes in the automation domain -- 4.3.3 Define the End-to-end Automation Adapter automation policy -- 4.4 Miscellaneous information -- Chapter 5. Case study scenario: Application Servers on AIX first-level automation domain -- 5.1 Application server automation domain overview -- 5.1.1 Automation requirements -- 5.2 Automation domain configuration -- 5.2.1 Create the first-level automation domain -- 5.2.2 Define automation domain resources -- 5.2.3 Create the automation policy using relationship definitions -- 5.2.4 Change the Operational State of the resource group -- 5.2.5 Verify the operational quorum and tie breaker definition -- 5.3 End-to-end Automation Adapter configuration -- 5.3.1 Generate End-to-end Automation Adapter configuration files -- 5.3.2 Replicate the End-to-end Automation Adapter configuration files -- 5.3.3 Define the End-to-end Automation Adapter automation policy -- 5.4 Maintaining defined policies --
Chapter 6. Case study scenario: IBM DB2 on z/OS first-level automation domain -- 6.1 IBM DB2 on z/OS automation domain overview -- 6.2 IBM DB2 on z/OS automation domain configuration -- 6.2.1 Configure NetView for IBM Tivoli System Automation for z/OS -- 6.2.2 Automate NetView startup procedure -- 6.2.3 Allocate System-Unique data sets -- 6.2.4 Configure the Automation Manager -- 6.2.5 Allocate data sets for the ISPF customization dialog -- 6.2.6 Update PARMLIB data sets -- 6.2.7 Update PROCLIB data sets -- 6.2.8 Define the base automation policy.
6.3 Configuring automation policies for IBM DB2 -- 6.3.1 Identify required IBM DB2 messages -- 6.3.2 Create scenario automation policy database -- 6.3.3 Populate the scenario policy database -- 6.3.4 Define policies for monitoring IBM DB2 application tasks -- 6.3.5 Import customized scenario policy database into production -- 6.3.6 Create application group and define group membership -- 6.3.7 Verify Relationships in the automation policy -- 6.4 End-to-end Automation Adapter configuration -- 6.4.1 Check prerequisites and dependencies -- 6.4.2 Configure NetView and IBM Tivoli System Automation for z/OS -- 6.4.3 Enabling the Event Automation Service -- 6.4.4 Configure the Global Initialization File -- 6.4.5 Configure the NetView Message Adapter Service -- 6.4.6 Customize the End-to-end Automation Adapter -- 6.4.7 Perform configuration for security -- 6.4.8 Verify startup of the Automation Adapter -- 6.4.9 Solve timeout problems --
Chapter 7. Case study scenario: End-to-end automation domain -- 7.1 End-to-end Automation Management Component installation -- 7.2 Installation verification tasks -- 7.2.1 EAUTODB and OPCONDB databases -- 7.2.2 End-to-end Automation Management Component automation engine startup -- 7.2.3 End-to-end Automation Management Component applications status -- 7.2.4 JDBC providers connection -- 7.2.5 ISC portal application startup -- 7.2.6 System

Automation operations console -- 7.3 Users and group management
-- 7.3.1 Creating users -- 7.3.2 Creating user groups -- 7.3.3
Assigning access permissions to user groups -- 7.3.4 Assigning users
to user groups -- 7.3.5 Assigning access roles to user groups -- 7.4
End-to-end Automation Management Component configuration -- 7.5
Defining the end-to-end automation policy -- 7.5.1 Automation
requirements and policy overview -- 7.5.2 Creating the end-to-end
automation policy file.
7.5.3 Verifying the end-to-end automation policy file -- 7.5.4
Activating the end-to-end automation policy file -- Part 3 Appendixes
-- Appendix A. Troubleshooting overview -- Communication between
end-to-end components -- Location of the root directories -- Tivoli
common directory -- Log and trace files -- End-to-end Automation
Management Component automation engine -- End-to-end
Automation Management Component automation manager -- End-to-
end Automation Adapter -- IBM Tivoli System Automation for
Multiplatforms Operations Console -- The log viewer tool -- The
TraceWizard utility -- Appendix B. Additional material -- Locating the
Web material -- Using the Web material -- System requirements for
downloading the Web material -- How to use the Web material --
Abbreviations and acronyms -- Related publications -- IBM Redbooks
-- Other publications -- Online resources -- How to get IBM Redbooks
-- Help from IBM -- Index -- Back cover.

Sommario/riassunto

IBM Tivoli System Automation for Multiplatforms monitors and
automates applications distributed across Linux®, AIX®, and z/OS
operating systems by introducing a new product structure with two
major components: - IBM Tivoli System Automation for Multiplatforms
Base Component Provides high availability and disaster recovery
capabilities for Linux, Linux on zSeries and AIX clusters. - IBM Tivoli
System Automation for Multiplatforms End-to-end Automation
Management Component Provides automated operations and
monitoring capabilities for increasing availability and ease operations
of heterogeneous business applications. IBM Tivoli System Automation
for Multiplatforms utilizes an adapter infrastructure to integrate with
IBM Tivoli System Automation for z/OS, allowing for a more effective
high-availability, automation, and management of multi-tier
applications. This IBM Redbooks publication introduces the new
versions of the IBM Tivoli Systems Automation product family and gives
a broad understanding of the new architecture and components of both
IBM Tivoli System Automation for Multiplatforms V2.1 and IBM Tivoli
System Automation for z/OS V3.1 using a scenario based approach.
This book is a valuable addition to the existing products
documentation and should be read in conjunction with the official
products documentation, which complements some of the concepts
explained in this book. The instructions given in this book are very
detailed and explicit. These instructions are not the only way to install
the products and related prerequisites. They are meant to be followed
by anyone to successfully install, configure, and set up end-to-end
automation management using IBM Tivoli System Automation for
Multiplatforms V2.1 and IBM Tivoli System Automation for z/OS V3.1 in
environments of any size. Please note that the additional material
referenced in the text is not available from IBM.
