

1. Record Nr.	UNINA9910824561203321
Autore	Hapke Bruce
Titolo	Theory of reflectance and emittance spectroscopy // Bruce Hapke
Pubbl/distr/stampa	Cambridge ; ; New York, : Cambridge University Press, 2012
ISBN	1-139-20947-7 1-316-08917-7 1-280-48500-0 1-139-22231-7 9786613579980 1-139-21750-X 1-139-21442-X 1-139-22402-6 1-139-22059-4 1-139-02568-6
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (xiii, 513 pages) : digital, PDF file(s)
Classificazione	TEC036000
Disciplina	522/.67
Soggetti	Emission spectroscopy Reflectance spectroscopy Moon Surface Spectra
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: Acknowledgements; 1. Introduction; 2. Electromagnetic wave propagation; 3. The absorption of light; 4. Specular reflection; 5. Single particle scattering: perfect spheres; 6. Single particle scattering: irregular particles; 7. Propagation in a nonuniform medium: the equation of radiative transfer; 8. The bidirectional reflectance of a semi-infinite medium; 9. The opposition effect; 10. A miscellany of bidirectional reflectances and related quantities; 11. Integrated reflectances and planetary photometry; 12. Photometric effects of large scale roughness; 13. Polarization; 14. Reflectance spectroscopy; 15. Thermal emission and emittance spectroscopy; 16. Simultaneous transport of energy by radiation and conduction; Appendix A. A brief review of vector calculus; Appendix B.

Functions of a complex variable; Appendix C. The wave equation in spherical coordinates; Appendix D. Fraunhofer diffraction by a circular hole; Appendix E. Table of symbols; Bibliography; Index.

Sommario/riassunto

Reflectance and emittance spectroscopy are increasingly important tools in remote sensing and have been employed in most recent planetary spacecraft missions. They are primarily used to measure properties of disordered materials, especially in the interpretation of remote observations of the surfaces of the Earth and other terrestrial planets. This book gives a quantitative treatment of the physics of the interaction of electromagnetic radiation with particulate media, such as powders and soils. Subjects covered include electromagnetic wave propagation, single particle scattering, diffuse reflectance, thermal emittance and polarisation. This new edition has been updated to include a quantitative treatment of the effects of porosity, a detailed discussion of the coherent backscatter opposition effect, a quantitative treatment of simultaneous transport of energy within the medium by conduction and radiation, and lists of relevant databases and software. This is an essential reference for research scientists, engineers and advanced students of planetary remote sensing.
