Sommario/riassunto	<p>By the end of the thirteenth century the regions of Europe, the Middle East, the Indian Ocean area, and China were becoming integrated--through activities in an archipelago of cities located along major land and sea routes--into a world system of commerce and production, albeit one in which Europe still played a minor role. This book traces the formation of the system and explores how the Black Death, circa 1350, and the subsequent isolation of China under the Ming dynasty interrupted its further development. Abu-Lughod argues that demographic, geographic, and political factors, rather than any unique qualities of Western capitalism or "personality," account for the eventual triumph of "the West" during the ensuing period of six hundred years, and suggests that current transformations in the world system may signal the end of this aberrant phase of world history.</p>

#### Sommario/riassunto

This paper develops a structural macroeconometric model of the world economy, disaggregated into forty national economies. This panel dynamic stochastic general equilibrium model features a range of nominal and real rigidities, extensive macrofinancial linkages, and diverse spillover transmission channels. A variety of monetary policy analysis, fiscal policy analysis, spillover analysis, and forecasting applications of the estimated model are demonstrated. These include quantifying the monetary and fiscal transmission mechanisms, accounting for business cycle fluctuations, and generating relatively accurate forecasts of inflation and output growth.

Nota di contenuto	Pompey's reorganisation of the Near East, 66-63 BC -- Parthia -- Ptolemaic Kingdom -- Judaea -- Princedom of Chalcis and the Emiseno -- Parthia -- Ptolemaic Kingdom -- Judaea -- Princedom of Chalcis -- Nabataea -- Armenia -- Media Atropatene -- Commagene -- Conduct of Near Eastern rulers towards Rome -- Rome's conduct towards Near Eastern kingdoms and principalities.
Sommario/riassunto	"The study presents a critical analysis of the political relations between Rome and Near Eastern kingdoms and principalities during the age of civil war from the death of Julius Caesar in 44 to Mark Antony's defeat at Actium in 31 BC. By examining each bilateral relationship separately, it argues that those relations were marked by a large degree of continuity with earlier periods. Circumstances connected to the civil war had only a limited impact on the interstate conduct of the period despite the effects that the strife had on Rome's domestic politics and

the res publica. The ever-present rival Parthia and its external policies were more influential in steering the relations between Rome and Near Eastern powers"--
