Marine Renewable Energy: What Issues a Lawyer Should Possibly Think of? / Yen-Chiang Chang -- Index / Keyuan Zou.

Sommario/riassunto

The concept of sustainable development is created to coordinate the relationship between resource uses and environmental protection. Environmental protection is necessary to achieve the goal of sustainable resource uses and economic benefits deriving from resources can provide the conditions in which environmental protection can best be achieved. Sustainable Development and the Law of the Sea offers international legal perspectives on ocean uses including fisheries management, sustainable use of marine non-living resources, and marine protected areas in the context of sustainable development. Pushing that sustainability is a requirement for ocean use as well as for the establishment and development of the world marine legal order, the volume provides a useful reference for policy-makers and the international legal community and for all those interested in ocean governance.
