Sommario/riassunto	<p>The Agreement on Trade Related Aspects of Intellectual Property rights (TRIPS) requires all WTO members to adopt certain minimum standards for the protection of intellectual property rights including the rights of holders of patents for pharmaceutical products. The adoption of the standards delineated by the TRIPS Agreement appears to have resulted in significant loss of public health policy flexibilities for developing country members with respect to regulating the grant and use of pharmaceutical patents and controlling the cost of medicines. The Agreement, however, provides inherent flexibil</p>

Sommario/riassunto

Despite a growing interest in critical social and political studies of climate change, the field remains fragmented and diffuse. This is the first volume to collect this body of scholarship, providing a key reference point in the growing debate about climate change across the social sciences. The book provides a new set of insights into the ways in which climate change is creating new forms of social order, and the ways in which they are structured through the workings of rationality, power and politics. Governing the Climate is invaluable for three main audiences: social science researchers and advanced students in the field of climate change; the wider research community interested in global environmental politics and global environmental governance; and policy makers and researchers concerned more broadly with environmental politics at international, national and local levels.
