Sommario/riassunto	This book considers how mental health services have evolved over the past three decades to meet the needs of people with intellectual

disability, focusing on the ways that theories and policies have been applied to clinical practice. Nick Bouras and Geraldine Holt both have extensive experience in developing and running mental health services and bring together international contributors all with longstanding expertise in the fields of mental health and intellectual disability. They present the current evidence based practice as how people with intellectual disability can be best care
