1. Record Nr. UNINA9910825208303321

Autore	Wartak Marek S.
Titolo	Computational photonics : an introduction with MATLAB / / Marek S. Wartak, Wilfrid Laurier University [[electronic resource]]
Pubbl/distr/stampa	Cambridge : , : Cambridge University Press, , 2013
ISBN	1-139-85376-7 1-107-23424-7 0-511-79424-X 1-139-84468-7 1-139-84232-3 1-139-83994-2 1-283-87088-6 1-139-84113-0
Descrizione fisica	1 online resource (xiii, 452 pages) : digital, PDF file(s)
Classificazione	SCI053000
Disciplina	621.3815/2
Soggetti	Optoelectronic devices - Mathematical models Photonics - Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: 1. Introduction; 2. Basic facts from optics; 3. Basic facts from electromagnetism; 4. Slab waveguides; 5. Linear optical fibre and signal degradation; 6. Propagation of linear pulses; 7. Optical sources; 8. Optical amplifiers and EDFA; 9. Semiconductor optical amplifiers (SOA); 10. Optical receivers; 11. Finite difference time domain (FDTD) formulation; 12. Solar cells; 13. Metamaterials; Appendices; Index.
Sommario/riassunto	A comprehensive manual on the efficient modeling and analysis of photonic devices through building numerical codes, this book provides graduate students and researchers with the theoretical background and MATLAB programs necessary for them to start their own numerical experiments. Beginning by summarizing topics in optics and electromagnetism, the book discusses optical planar waveguides, linear optical fiber, the propagation of linear pulses, laser diodes, optical

amplifiers, optical receivers, finite-difference time-domain method, beam propagation method and some wavelength division devices, solitons, solar cells and metamaterials. Assuming only a basic knowledge of physics and numerical methods, the book is ideal for engineers, physicists and practising scientists. It concentrates on the operating principles of optical devices, as well as the models and numerical methods used to describe them.
