

1. Record Nr.	UNINA9910825284003321
Autore	Vetter Scott
Titolo	The IBM eServer BladeCenter JS20 [[electronic resource] /] / Ben Gibbs ... [et al.]
Pubbl/distr/stampa	Austin, TX, : IBM, International Technical Support Organization, c2005
Edizione	[2nd ed.]
Descrizione fisica	xvi, 170 p. : ill
Collana	Redbooks
Soggetti	Client/server computing IBM computers Computer architecture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"This edition applies to the IBM eServer BladeCenter JS20, type 8842." "June 2005."
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	Blade servers are a relatively new technology. They have captured industry focus because of their modular design, which can reduce cost with a more efficient use of valuable floor space. They offer simplified management, which can help to speed such tasks as installing, reprovisioning, updating, and troubleshooting hundreds of blade servers. You can do all of this remotely using one graphical console with IBM Director systems management tools. In addition, blade servers provide improved performance by doubling current rack density. By integrating resources and sharing key components, costs decrease and availability increases. The IBM eServer BladeCenter boasts innovative modular technology, leadership density, and availability. It was designed to help solve a multitude of real-world problems. This IBM Redbooks publication takes an in-depth look at the IBM eServer BladeCenter JS20. This is a two-way blade server for applications requiring 64-bit computing. It is ideal for computer-intensive applications and transactional Internet servers. This book helps you to install, tailor, and configure the IBM eServer BladeCenter JS20.
