Sommario/riassunto	A Young Mind in a Growing Brain summarizes some initial conclusions that follow simultaneous examination of the psychological milestones of human development during its first decade and what has been learned about brain growth. This volume proposes that development is the process of experience working on a brain that is undergoing significant biological maturation. Experience counts, but only when the brain has developed to the point of being able to process, encode, and interact with these new environmental experiences. This book's aim is to acquaint developmental biologists an
