Sommario/riassunto

Reduction of maternal mortality is one of the major goals of several recent international conferences and has been included in the Millennium Development Goals. However, measuring maternal mortality is difficult and complex. Reliable estimates of the dimensions of the problem are not generally available and it is difficult to compare the data obtained from different sources and to assess the overall magnitude of the problem. In response to these challenges, WHO, UNICEF and UNFPA have developed an approach that seeks both to generate estimates for countries with no data and to correct available
