

1. Record Nr.	UNINA9910825867403321
Titolo	Chemistry and technology of emulsion polymerisation / / editor, A.M. van Herk
Pubbl/distr/stampa	Chichester, West Sussex, U.K., : John Wiley & Sons Inc., 2013
ISBN	9781118638521 1118638522 9781118638378 1118638379 9781118638361 1118638360
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (376 p.)
Classificazione	TEC009010
Altri autori (Persone)	HerkAlex van
Disciplina	668.9/2
Soggetti	Emulsion polymerization Latex - Industrial applications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: List of Contributors xi Abbreviations xiii List of Frequently Used Symbols xvii Introduction to the Second Edition xix Introduction to the First Edition xxi 1 Historic Overview 1 Finn Knut Hansen 1.1 The Early Stages 1 1.2 The Second Half of the Twentieth Century 9 1.2.1 Product Development 9 1.2.2 Kinetic Theory 11 1.2.3 Emulsion Polymerisation in Monomer Droplets 19 1.2.4 Industrial Process Control and Simulation 21 2 Introduction to Radical (Co)Polymerisation 23 A.M. van Herk 2.1 Mechanism of Free Radical Polymerisation 23 2.2 Rate of Polymerisation and Development of Molecular Mass Distribution 25 2.2.1 Rate of Polymerisation 25 2.2.2 Kinetic Chain Length 26 2.2.3 Chain Length Distribution 27 2.2.4 Temperature and Conversion Effects 30 2.3 Radical Transfer Reactions 31 2.3.1 Radical Transfer Reactions to Low Molecular Mass Species 31 2.3.2 Radical Transfer Reactions to Polymer 32 2.4 Radical Copolymerisation 34 2.4.1 Derivation of the Copolymerisation Equation 34 2.4.2 Types of Copolymers 37 2.4.3 Polymerisation Rates in Copolymerisations 39 2.5 Controlled Radical Polymerisation 41 3

Emulsion Polymerisation 43 A.M. van Herk and R.G. Gilbert 3.1
Introduction 43 3.2 General Aspects of Emulsion Polymerisation 44 3.3
Basic Principles of Emulsion Polymerisation 46 3.4 Particle Nucleation
47 3.5 Particle Growth 51 3.5.1 The Zero-One and Pseudo-Bulk
Dichotomy 52 3.5.2 Zero-One Kinetics 53 3.5.3 Pseudo-Bulk Kinetics
55 3.5.4 Systems between Zero-One and Pseudo-Bulk 57 3.6
Ingredients in Recipes 57 3.6.1 Monomers 58 3.6.2 Initiators 58 3.6.3
Surfactants 58 3.6.4 Other Ingredients 59 3.7 Emulsion
Copolymerisation 59 3.7.1 Monomer Partitioning in Emulsion
Polymerisation 59 3.7.2 Composition Drift in Emulsion Co- and
Terpolymerisation 63 3.7.3 Process Strategies in Emulsion
Copolymerisation 64 3.8 Particle Morphologies 66 3.8.1 Core-Shell
Morphologies 68 4 Emulsion Copolymerisation, Process Strategies 75
Jose Ramon Leiza and Jan Meuldijk 4.1 Introduction 75 4.2 Monomer
Partitioning 79 4.2.1 Slightly and Partially Water Miscible Monomers 79
4.2.2 Consequences of Monomer Partitioning for the Copolymer
Composition 84 4.3 Process Strategies 86 4.3.1 Batch Operation 86
4.3.2 Semi-Batch Operation 89 4.3.3 Control Opportunities 92 5 Living
Radical Polymerisation in Emulsion and Miniemulsion 105 Bernadette
Charleux, Michael J. Monteiro, and Hans Heuts 5.1 Introduction 105 5.2
Living Radical Polymerisation 106 5.2.1 General/Features of a
Controlled/Living Radical Polymerisation 106 5.2.2 Reversible
Termination 108 5.2.3 Reversible Chain Transfer 116 5.3 Nitroxide-
Mediated Polymerisation in Emulsion and Miniemulsion 119 5.3.1
Introduction 119 5.3.2 Control of Molar Mass and Molar Mass
Distribution 120 5.3.3 Synthesis of Block and Random or Gradient
Copolymers via (Mini)Emulsion Polymerisation 125 5.3.4 Surfactant-
Free Emulsion Polymerisation Using the Polymerisation-Induced Self-
Assembly Technique 126 5.4 ATRP in Emulsion and Miniemulsion 126
5.4.1 Introduction 126 5.4.2 Direct ATRP 127 5.4.3 Reverse ATRP 130
5.4.4 Next Generation ATRP Techniques: SRNI and AGET 132 5.4.5
Some Concluding Remarks on ATRP in Emulsion 135 5.5 Reversible
Chain Transfer in Emulsion and Miniemulsion 136 5.5.1 Low Cex
Reversible Chain Transfer Agents 136 5.5.2 High Cex Reversible Chain
Transfer Agents 137 5.6 Conclusion 143 6 Particle Morphology 145

Sommario/riassunto

"Chemistry and Technology of Emulsion Polymerisation 2e provides a practical and intuitive explanation of emulsion polymerization, in combination with both conventional and controlled radical polymerization. For those working in industry, coupling theory with everyday practice can be difficult. By carefully explaining the principles of the reaction, based on well-designed experimental investigation, the book explains how the principles relate to practical application. The second edition of this book includes a new chapter on morphology of latex particles, a rapidly progressing area where modelling the thermodynamic and kinetic aspects of phase separation and morphology has developed into a mature and powerful tool to predict and control morphology of latex particles. Another area that is rapidly progressing is the application of controlled radical polymerisation in

emulsion polymerization. Controlled radical polymerisation is used in aiding encapsulation of inorganic particles like pigment particles and clay platelets. These latest developments are included in the second edition"--
