Autore	Zoli Edda
Titolo	Commodity Price Volatility, Cyclical Fluctuations, and Convergence : : What is Ahead for Inflation in Emerging Europe? // Edda Zoli
Pubbl/distr/stampa	Washington, D.C. : , : International Monetary Fund, , 2009
ISBN	1-4623-8100-6 1-4527-4906-X 9786612842634 1-282-84263-3 1-4518-7189-9
Edizione	[1st ed.]
Descrizione fisica	1 online resource (21 p.)
Collana	IMF Working Papers
Disciplina	338.278
Soggetti	Primary commodities - Prices - Europe Inflation (Finance) - Europe Inflation Macroeconomics 'Panel Data Models Spatio-temporal Models' Time-Series Models Dynamic Quantile Regressions Dynamic Treatment Effect Models Diffusion Processes State Space Models Price Level Deflation Agriculture: Aggregate Supply and Demand Analysis Prices Energy: Demand and Supply Commodity Markets Food prices Commodity price shocks Fuel prices Oil prices Ukraine
Lingua di pubblicazione	Inglese

Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Contents; I. Introduction; Figures; 1. Headline Inflation; II. VAR analysis; 2. Variance Decomposition of Headline Inflation; Tables; 1: Response of Domestic Energy Inflation to International Oil Price Inflation Shocks; 2. Response of Domestic Food Inflation to International Food Price Inflation Shocks; III. Panel Estimation; 3. Response of Core Inflation to Shocks to Domestic Food and Energy Price Inflation; 4. Panel Regression Results; IV. Conclusion: What is Ahead for Inflation in Emerging Europe?; Appendixes; 1. Variable Definition and Data Sources; 2. Other Panel Results; References
Sommario/riassunto	This paper assesses the role of international commodity prices, cyclical fluctuations, and convergence in driving inflation in 18 European emerging economies. Country specific VARs and panel estimates indicate that international commodity price shocks have a significant impact on domestic inflation, but the inflation response is asymmetric for positive and negative shocks. Cyclical fluctuations explain a relative small share of inflation variability, and the inflation response is asymmetric during upturns and downturns. Price convergence is estimated to add nearly 3 percentage points to headline inflation, for the average country whose price level is about 50 percent relative to the EU-15 average.
