Sommario/riassunto	This book follows the renovation of European economic history towards

a more unified interpretation of sources of growth and stagnation. To better understand the diversity of patterns of growth, we need to look beyond the study of the industrialization of the core economies, and explore the centuries before it occurred. Portuguese agriculture was hardly ever at the European productivity and technological forefront and the distance from it varied substantially across the second Millennium. Yet if we look at the periods of the Christian Reconquista, the recovery from the Black Death, the response to the globalization of the Renaissance, to the eighteenth century economic enlightenment, or to nineteenth century industrialization, we may conclude that agriculture in this country of the European periphery was often adaptive and dynamic. The fact that economic backwardness was not overcome by the end of the period is no longer the most relevant aspect of that story. Contributors are: Luciano Amaral, Amélia Branco, Dulce Freire, António Henriques, Pedro Lains, Susana Münch Miranda, Margarida Sobral Neto, Jaime Reis, Ana Maria Rodrigues, José Vicente Serrão and Ester G. Silva.
