Collection localities -- Appendix B. Checklist of the ants of<br>Fiji   |
| Sommario/riassunto      | The ant fauna of the Fijian archipelago is a diverse assemblage of<br>endemic radiations, pan-Pacific species, and exotics introduced from<br>around the world. The Ants of Fiji describes the entire Fijian ant fauna,<br>and includes the results of a recently completed archipelago-wide<br>biodiversity inventory. A total of 187 ant species representing 43<br>genera are recognized here with an illustrated key to genera, synopses<br>of each species, keys to species of all genera, and a species list. The<br>work is heavily illustrated with specimen images, distribution maps,<br>and habitat elevation charts. |
