Sommario/riassunto

This volume is the first to deal with Turkish communicative development and disorders, reflecting the use of Turkish by a sizeable population in multilingual settings in Europe, USA, and Australia. In addition to Speech-language Pathologists, the book will be of interest to professionals from related fields such as clinical linguistics, psychology, psycholinguistics, neurolinguistics, audiology, and special education. This book presents a compendium of information about the profession of speech-language pathology, cultural differences, assessment materials and research done in communication disorders in Turkey. It also covers acquisition and disorders in multilingual contexts where there is significant Turkish immigration.
