Coping with the global and emerging market crisis -- About the authors -- Advance quotes for advanced economies and emerging markets -- Notes -- References -- Index.
Sommario/riassunto	There is intense competition among emerging markets to capture their share of the global economy. This book addresses questions that are germane to accomplishing this goal. Most important to this end is the study and practice of international business and foreign trade. Undertaking such a study raises many questions such as: Why are emerging markets and the firms doing business in them internationalizing so aggressively? Why in the past decade has the pace

of internationalization accelerated so rapidly? What competitive advantages do these emerging economies enjoy in comparison to advanced economies, such as the G20, and what are the origins of those advantages? Through what strategies are emerging market blocks such as the BRICS (Brazil, Russia, India, China, and South Africa) and the CIVETS (Colombia, Indonesia, Vietnam, Egypt, Turkey, and South Africa) building their global presence and expanding their market reach? How are emerging markets rivaling advanced economies and how are they affecting the already established rivalries among those economies? This book will answer these and other questions. In doing so, it will attempt to address the larger issue of what it all means for mainstream international business theory and its actual practice.
