

1. Record Nr.	UNINA9910827041803321
Autore	Hardin Therese
Titolo	Concepts and semantics of programming languages 2 : modular and object-oriented constructs with Ocaml, Python, C++, Ada and Java // Therese Hardin [and three others]
Pubbl/distr/stampa	Hoboken : , : ISTE Ltd / John Wiley and Sons Inc, , [2021] ©2021
ISBN	1-119-85118-1 1-119-85119-X 1-119-85117-3
Descrizione fisica	1 online resource (265 pages)
Collana	Computer engineering series
Disciplina	005.13
Soggetti	Programming languages (Electronic computers) - Semantics OCaml (Computer program language) Python (Computer program language) C++ (Computer program language) Ada (Computer program language) Java (Computer program language)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Sommario/riassunto	This book - composed of two volumes - explores the syntactical constructs of the most common programming languages, and sheds a mathematical light on their semantics, providing also an accurate presentation of the material aspects that interfere with coding. Concepts and Semantics of Programming Languages 2 presents an original semantic model, collectively taking into account all of the constructs and operations of modules and classes: visibility, import, export, delayed definitions, parameterization by types and values, extensions, etc. The model serves for the study of Ada and OCaml modules, as well as C header files. It can be deployed to model object and class features, and is thus used to describe Java, C++, OCaml and Python classes. This book is intended not only for computer science

students and teachers but also seasoned programmers, who will find a guide to reading reference manuals and the foundations of program verification.
