Autore	Lama Ruy
Titolo	Accounting for Output Drops in Latin America // Ruy Lama
Pubbl/distr/stampa	Washington, D.C. : , : International Monetary Fund, , 2009
ISBN	1-4623-3055-X 1-4518-7214-3 9786612842887 1-4519-9130-4 1-282-84288-9
Edizione	[1st ed.]
Descrizione fisica	49 p. : ill
Collana	IMF Working Papers
Soggetti	Business cycles - Latin America Business forecasting - Latin America Investments: Bonds Macroeconomics Economic Theory Production and Operations Management Labor Economics: General Production Cost Capital and Total Factor Productivity Capacity Prices, Business Fluctuations, and Cycles: General (includes Measurement and Data) General Financial Markets: General (includes Measurement and Data) Financial Economics Labour income economics Economic growth Investment & securities Economic theory & philosophy Labor Total factor productivity Business cycles Bonds Financial frictions Labor economics Industrial productivity

Economic forecasting
Argentina

Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Intro -- Contents -- I. Introduction -- II. Benchmark Small Open Economy Model -- III. Quantitative Analysis -- A. Calibration and Estimation -- B. Simulation: Accounting for Output Drops in Latin America -- IV. Sensitivity Analysis -- A. High Risk Aversion Coefficient -- B. No Adjustments Costs -- C. Variable Capital Utilization -- V. Concluding Remarks -- Appendices -- A. Benchmark Small Open Economy Model -- B. Equivalence between Wedges and Theoretical Models -- C. Data Sources -- References -- Figures -- 1. Detrended GDP per capita in Latin American Economies -- 2. TFP, Labor Wedge, Capital Wedge, and Bond Wedge -- 3. Effect of TFP on GDP -- 4. Effect of Labor Wedge on GDP -- 5. Labor Wedge, Model Prediction, and Real Interest Rate -- 6. Effect of Capital Wedge on GDP -- 7. Effect of Bond Wedge on GDP -- 8. Sensitivity Analysis -- Tables -- 1. Calibrated Parameters -- 2. Parameters of Stochastic Processes -- 3. Contributions to Output Drops -- 4. Properties of Wedges -- 5. Model Predictions.
Sommario/riassunto	This paper evaluates what type of models can account for the recent episodes of output drops in Latin America. I develop an open economy version of the business cycle accounting methodology (Chari, Kehoe, and McGrattan, 2007) in which output fluctuations are decomposed into four sources: total factor productivity (TFP), a labor wedge, a capital wedge, and a bond wedge. The paper shows that the most promising models are the ones that induce fluctuations of TFP and the labor wedge. On the other hand, models of financial frictions that translate into a bond or capital wedge are not successful in explaining output drops in Latin America. The paper also discusses the implications of these results for policy analysis using alternative DSGE models.
