                      Global Superpower; Eurocommunism; The Crisis of Legitimacy; Reform
                      and Collapse; Epilogue: The End of Soviet and European Communism in
                      World History; References; Index

Sommario/riassunto

The Global Revolution. A History of International Communism 1917-1991 establishes a relationship between the history of communism and the main processes of globalization in the past century. Drawing on a wealth of archival sources, Silvio Pons analyses the multifaceted and contradictory relationship between the Soviet Union and the international communist movement, to show how communism played a major part in the formation of our modern world.The volume presents the argument that during the age of wars from 1914 to 1945, the establishment of the Soviet state in Russia and the birth of the comm

Sommario/riassunto

The phenomenon of soil-structure interactions in marine environments has attracted great attention from coastal geotechnical engineers in recent years. One of the reasons for the growing interest is the rapid development of marine resources (such as in the oil and gas industry, marine renewable energy, and fish farming industry) as well as the damage to marine infrastructure that has occurred in the last two decades. To assist practical engineers in the design and planning of coastal geotechnical projects, a better understanding of the mechanisms of soil-structure interactions in marine environments is desired. This Special Issue reports the recent advances in the problems of structure-seabed interactions in marine environment and provides practical engineers and researchers with information on recent

developments in this field.
