Sommario/riassunto

Exploring the origins of urbanism - the emergence and development of the first cities, has long constituted one of the main challenges of archaeological and ancient historical research. Studying cities in a long-term and cross-cultural perspective links the past with the present, allowing a better understanding of one of the most important developments in human history. Moreover, archaeological research on ancient cities can contribute to a better understanding of contemporary processes of urbanisation. The 21 papers in this volume aim bring together the latest continental and English-speaking
