| Sommario/riassunto      | This volume is the result of an academic initiative organized by the Center for International Historical Studies of the University of Barcelona (CEHI-UB) in April 2012, with the purpose of bringing Military History to the center of the attention of university and historiographical debate. This choice is based on the idea that, too often, Military History is considered a technical discipline, only intended for experts. On the contrary, we think that - on the one hand - this research field cons... |

| Sommario/riassunto      | This book delves into the life and achievements of Nicolaus Copernicus, a pivotal figure in the history of astronomy. Known for his revolutionary heliocentric model, Copernicus challenged the long-standing geocentric views of Aristotle and Ptolemy, positioning the Sun, rather than the Earth, at the center of the universe. The text explores the historical and cultural context of 15th and 16th-century Europe, amidst the backdrop of humanism, the Protestant Reformation, and the discovery of the New World. It highlights Copernicus's education, career, and the profound impact of his work on future astronomers such as Galileo, Kepler, and Newton. Intended for readers interested in the history of science and the transformative period of the Copernican |

revolution, the book underscores Copernicus's role in altering humanity's understanding of the cosmos.
