Sommario/riassunto	"Are you looking for concise, practical answers to questions that are often left unanswered by traditional inflammatory bowel disease (IBD) references? Are you seeking brief, evidence-based and updated advice for complicated cases or complications? Curbside Consultation in IBD: 49 Clinical Questions, Second Edition provides quick and direct answers to the thorny questions commonly posed during a "curbside consultation" between colleagues. Dr. David T. Rubin, Dr. Sonia Friedman, and Dr. Francis A. Farraye are joined by a world-class group of contributors on the Second Edition, which offers expert advice, preferences, and opinions on tough clinical questions commonly associated with IBD. The unique Q&A format provides quick access to current information related to IBD with the simplicity of a conversation between two colleagues. Numerous images, diagrams, and references are included to better illustrate IBD. Some of the questions that are answered inside the Second Edition include: - How can I clarify the diagnosis in my patient with indeterminate colitis? - What is the role of

concomitant immunomodulators with biologic use in IBD? - When in the treatment algorithm should methotrexate be considered for Crohn's disease? Is there a role for low-dose methotrexate in the prevention of immunogenicity? - How should we be using fecal markers such as lactoferrin and calprotectin in our patients? - Should I use chromoendoscopy in my surveillance colonoscopy in IBD? How and which agent? - What is the updated approach to antimetabolites and biologic therapy in IBD and pregnancy? - When should I consider anti-integrin therapy for my patient with IBD?"--Provided by publisher.
