Hated Child; Escape to Disease; Two Cases; A Case of Speech Disturbance; The Educational Work of the Private Teacher

Sommario/riassunto

First published in 1930 this book was written under the leadership and inspiration of Alfred Adler. He and a group of physicians and educators organized 28 child guidance clinics in Vienna, Berlin and Munich in the years prior to publication. Conducted according to the tenets of Individual Psychology, these clinics revealed many new and stimulating problems that they felt were as applicable to conditions in America and England at the time as in the experimental countries.
