Note generali Nota di bibliografia Includes bibliographical references and index. Nota di contenuto Authority, sovereignty, and international change -- The cartographic revolution -- Mapping the territorial state -- New World mapping and colonial reflection -- Peace treaties and political transformation --Mapping the territorialization of France -- The cartographic state today. Why is today's world map filled with uniform states separated by linear Sommario/riassunto boundaries? The answer to this question is central to our understanding of international politics, but the question is at the same

time much more complex - and more revealing - than we might first think. This book examines the important but overlooked role played by cartography itself in the development of modern states. Drawing upon evidence from the history of cartography, peace treaties and political practices, the book reveals that early modern mapping dramatically altered key ideas and practices among both rulers and subjects, leading to the implementation of linear boundaries between states and centralized territorial rule within them. In his analysis of early modern innovations in the creation, distribution and use of maps, Branch explains how the relationship between mapping and the development of modern territories shapes our understanding of international politics today.
