Sommario/riassunto	The monographs in this volume summarize the safety data on 13 pesticides that could leave residues in food commodities. These pesticides are bentazone, captan, dimethipin, fenpropimorph, fenpyroximate, fludioxinil, folpet, glyphosate, phorate, pirimicarb, propiconazole, triademefon/triademenol and trifloxystrobin. The data summarized in the toxicological monographs served as the basis for the acceptable dietary intakes and acute reference doses that were established by the Meeting.
