

1. Record Nr.	UNINA9910828352603321
Titolo	Self-healing properties of new surface treatments [[electronic resource] /] / edited Lorenzo Fedrizzi, Wolfram Furbeth & Fatima Montemor
Pubbl/distr/stampa	Leeds, U.K., : Maney Pub., 2011
ISBN	1-283-28668-8 9786613286680 1-61344-278-5 1-907975-23-3
Descrizione fisica	1 online resource (320 p.)
Collana	European Federation of Corrosion publications, , 1354-5116 ; ; no. 58
Altri autori (Persone)	FedrizziL FurbethWolfram MontemorFatima
Disciplina	620.11223
Soggetti	Corrosion and anti-corrosives Stainless steel
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Published for the European Federation of Corrosion by Maney Publishing on behalf of the Institute of Materials, Minerals & Mining."
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Title page; Half title; Contents; European Federation of Corrosion (EFC) publications: Series introduction; Volumes in the EFC series; 1 Anticorrosive pigments in organic coatings; 2 Self-healing anticorrosion coatings; 3 A review on the use of nanostructured and functional organosilane coatings modified with corrosion inhibitors as environmentally friendly pre-treatments for metallic substrates; 4 Electrochemical study of cold-rolled steel substrates pre-treated with silane films modified with CeO ₂ and TiO ₂ nanoparticles 5 Pyrrole-based silane primer for corrosion protection of commercial aluminium alloys 6 Sol-gel derived hybrid materials as functional coatings for metal surfaces; 7 Hybrid sol-gel/conducting polymer coatings: self-healing coatings for the corrosion protection of aerospace alloys; 8 Corrosion performance of nanoparticle-containing polyaniline films on AA3105 aluminium alloy; 9 Advances in the selection and use of rare-earth-based inhibitors for self-healing organic coatings; 10 Corrosion inhibiting cerium compounds for

chromium-free corrosion protective coatings on AA 2024
11 Hybrid Ce-containing silica-methacrylate sol-gel coatings for corrosion protection of aluminium alloys
12 Organosilicon plasma polymer coatings containing Ce-based nanoparticles: characterisation of anti-corrosion properties;
13 Polypyrrole/aluminium flake hybrid pigments for corrosion inhibition of aluminium 2024;
14 Electrochemical behaviour of ZrO₂ sol-gel films doped with corrosion inhibitors on AA2024 aluminium alloy;
15 Influence of the doping agent on the corrosion protection properties of polypyrrole grown on Al-2024-T3;
16 Self-healing coating with fluoro-organic compound on zinc
Index

Sommario/riassunto

This publication was motivated by the highly successful workshop on self-healing coatings held on 12 September 2007 at the European Federation of Corrosion's annual EUROCORR conference in Freiburg. It includes sixteen contributions, some of which were selected from the proceedings of the workshop (often in extended form) together with a number of specially invited articles and reviews.
