Drawing on research in the fields of cognitive and developmental psychology, attachment, trauma, and neuroscience, as well as 20 years in forensic and private practice, Paul Renn deftly illustrates the ways in which this research may be used to inform an integrated empirical/hermeneutic model of clinical practice. He suggests that silent, invisible processes derived from the past maintain non-optimal ways of experiencing and relating in the present, and that a neuroscience understanding of the dynamic nature of memories, and of the way in which the implicit and explicit memory systems operate
