## Sommario/riassunto

In the hauntingly beautiful sculptures of Tilmann Riemenschneider, the Late Gothic art of Germany achieved its highest expression. Now, for the first time in English, the eminent art historian Justus Bier accords Riemenschneider the extended attention he so richly deserves. Riemenschneider ( ca. 1460--1531) holds a pivotal place in the development of German art. Rejecting the anonymous soulfulness of earlier Gothic sculpture, he created a style reflecting the deeply spiritual character of his time, yet one that also anticipated the humanism of the Italian Renaissance so soon to revolutionize

Sommario/riassunto	This collection focuses on the ontology of space and time. It is centred on the idea that the issues typically encountered in this area must be tackled from a multifarious perspective, paying attention to both a priori and a posteriori considerations. Several experts in this area contribute to this volume: G. Landini discusses how Russell's

conception of time features in his general philosophical perspective; D. Dieks proposes a middle course between substantialist and relationist accounts of space-time; P. Graziani argues that it is necessary to provide an account of the "synthetic procedures" implicit in the recourse to diagrams in Euclid's Elements, while E. Mares comes to the conclusion that in Euclid's Elements we should treat the parallel postulate as empirical and the postulate that space is continuous as a priori. M. Arsenijevic/M. Adži present an important formal result concerning two theories of the infinite two-dimensional continua, which sheds new light on the current dispute between gunkologists and pointilists; F. Orilia discusses two problems for presentism, one regarding the duration of the present and the other related to Zeno's paradoxes. A. Iacona delves deep into logical matters by focusing on the so-called  $T \times W$  modal frames in order to deal with the determinism-indeterminism controversy. D. Mancuso outlines a non-standard temporal model compatible with time travel, and V. Fano/G. Macchia discuss time travels in the light of an important foundational principle of modern cosmology, Weyl's Principle.
