Nota di contenuto Preliminary Materials / W.B. Eide and A. Eide -- Chapter One. Introduction / W.B. Eide and A. Eide -- Chapter Two. Comparison With Other International Human Rights Provisions / W.B. Eide and A. Eide -- Chapter Three. The Scope Of Article 24 / W.B. Eide and A. Eide.

Sommario/riassunto This volume constitutes a commentary on Article 24 of the United Nations Convention on the Rights of the Child. It is part of the series, A Commentary on the United Nations Convention on the Rights of the Child , which provides an article by article analysis of all substantive, organizational and procedural provisions of the CRC and its two Optional Protocols. For every article, a comparison with related human rights provisions is made, followed by an in-depth exploration of the nature and scope of State obligations deriving from that article. The series constitutes an essential tool for actors in the field of children's rights, including academics, students, judges, grassroots workers, governmental, non- governmental and international officers. The series is sponsored by the Belgian Federal Science Policy Office .

- Soggetti** Climatic changes - Economic aspects
Drought management
- Lingua di pubblicazione** Inglese
- Formato** Materiale a stampa
- Livello bibliografico** Monografia
- Note generali** Includes index.

Cape Town's drought crisis grabbed global headlines in 2018 and its causes and solutions were – and continue to be — hotly debated. But managing water shortages and other climate change impacts have been integrated into the city's urban policy-making for some time, in response to rapid urbanisation and uncertainty about the exact nature, timing and magnitude of city-scale climatic changes. This book presents initiatives at the local government level, across a range of departments, from environmental resource management to housing, stormwater management, water management, energy management and spatial planning. In addition, it records the progress made and challenges faced in mainstreaming climate change into urban policies, processes, programmes and practices, a problem facing most urban areas around the world. The text was co-produced by academics and municipal officials, including economists, engineers, ecologists, geographers and planners, who worked collaboratively in a process of mutual learning. This hybrid process, where practitioner experience is coupled with an academic and research perspective, has produced an 'insider' view of urban development and climate change governance through the lens of theory. The result provides new practice-based knowledge for policy-making in the transition towards more sustainable cities in the face of climate change, particularly those in the global South.
