

1. Record Nr.	UNINA9910829806303321
Autore	Vary Peter
Titolo	Digital Speech Transmission and Enhancement
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2023 ©2024
ISBN	1-119-06099-0 1-119-06097-4
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (595 pages)
Collana	IEEE Press Series
Altri autori (Persone)	MartinRainer
Disciplina	006.454
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Preface -- Chapter 1 Introduction -- Chapter 2 Models of Speech Production and Hearing -- 2.1 Sound Waves -- 2.2 Organs of Speech Production -- 2.3 Characteristics of Speech Signals -- 2.4 Model of Speech Production -- 2.4.1 Acoustic Tube Model of the Vocal Tract -- 2.4.2 Discrete Time AllPole Model of the Vocal Tract -- 2.5 Anatomy of Hearing -- 2.6 Psychoacoustic Properties of the Auditory System -- 2.6.1 Hearing and Loudness -- 2.6.2 Spectral Resolution -- 2.6.3 Masking -- 2.6.4 Spatial Hearing -- 2.6.4.1 HeadRelated Impulse Responses and Transfer Functions -- 2.6.4.2 Law of The First Wavefront -- References -- Chapter 3 Spectral Transformations -- 3.1 Fourier Transform of Continuous Signals -- 3.2 Fourier Transform of Discrete Signals -- 3.3 Linear Shift Invariant Systems -- 3.3.1 Frequency Response of LSI Systems -- 3.4 The ztransform -- 3.4.1 Relation to Fourier Transform -- 3.4.2 Properties of the ROC -- 3.4.3 Inverse zTransform -- 3.4.4 z Transform Analysis of LSI Systems -- 3.5 The Discrete Fourier Transform -- 3.5.1 Linear and Cyclic Convolution -- 3.5.2 The DFT of Windowed Sequences -- 3.5.3 Spectral Resolution and Zero Padding -- 3.5.4 The Spectrogram -- 3.5.5 Fast Computation of the DFT: The FFT -- 3.5.6 Radix2 DecimationinTime FFT -- 3.6 Fast Convolution -- 3.6.1 Fast Convolution of Long Sequences -- 3.6.2 Fast Convolution by OverlapAdd -- 3.6.3 Fast Convolution by OverlapSave -- 3.7

Analysis-Modification-Synthesis Systems -- 3.8 Cepstral Analysis --
 3.8.1 Complex Cepstrum -- 3.8.2 Real Cepstrum -- 3.8.3 Applications
 of the Cepstrum -- 3.8.3.1 Construction of MinimumPhase Sequences
 -- 3.8.3.2 Deconvolution by Cepstral Mean Subtraction -- 3.8.3.3
 Computation of the Spectral Distortion Measure -- 3.8.3.4
 Fundamental Frequency Estimation -- References.
 Chapter 4 Filter Banks for Spectral Analysis and Synthesis -- 4.1
 Spectral Analysis Using Narrowband Filters -- 4.1.1 ShortTerm Spectral
 Analyzer -- 4.1.2 Prototype Filter Design for the Analysis Filter Bank --
 4.1.3 ShortTerm Spectral Synthesizer -- 4.1.4 ShortTerm Spectral
 Analysis and Synthesis -- 4.1.5 Prototype Filter Design for the
 Analysis-Synthesis filter bank -- 4.1.6 Filter Bank Interpretation of the
 DFT -- 4.2 Polyphase Network Filter Banks -- 4.2.1 PPN Analysis Filter
 Bank -- 4.2.2 PPN Synthesis Filter Bank -- 4.3 Quadrature Mirror Filter
 Banks -- 4.3.1 Analysis-Synthesis Filter Bank -- 4.3.2 Compensation of
 Aliasing and Signal Reconstruction -- 4.3.3 Efficient Implementation --
 4.4 Filter Bank Equalizer -- 4.4.1 The Reference Filter Bank -- 4.4.2
 Uniform Frequency Resolution -- 4.4.3 Adaptive Filter Bank Equalizer:
 Gain Computation -- 4.4.3.1 Conventional Spectral Subtraction --
 4.4.3.2 Filter Bank Equalizer -- 4.4.4 Nonuniform Frequency
 Resolution -- 4.4.5 Design Aspects & Implementation --
 References -- Chapter 5 Stochastic Signals and Estimation -- 5.1 Basic
 Concepts -- 5.1.1 Random Events and Probability -- 5.1.2 Conditional
 Probabilities -- 5.1.3 Random Variables -- 5.1.4 Probability
 Distributions and Probability Density Functions -- 5.1.5 Conditional
 PDFs -- 5.2 Expectations and Moments -- 5.2.1 Conditional
 Expectations and Moments -- 5.2.2 Examples -- 5.2.2.1 The Uniform
 Distribution -- 5.2.2.2 The Gaussian Density -- 5.2.2.3 The
 Exponential Density -- 5.2.2.4 The Laplace Density -- 5.2.2.5 The
 Gamma Density -- 5.2.2.6 2Distribution -- 5.2.3 Transformation of a
 Random Variable -- 5.2.4 Relative Frequencies and Histograms -- 5.3
 Bivariate Statistics -- 5.3.1 Marginal Densities -- 5.3.2 Expectations
 and Moments -- 5.3.3 Uncorrelatedness and Statistical Independence
 -- 5.3.4 Examples of Bivariate PDFs.
 5.3.4.1 The Bivariate Uniform Density -- 5.3.4.2 The Bivariate Gaussian
 Density -- 5.3.5 Functions of Two Random Variables -- 5.4 Probability
 and Information -- 5.4.1 Entropy -- 5.4.2 Kullback-Leibler Divergence
 -- 5.4.3 CrossEntropy -- 5.4.4 Mutual Information -- 5.5 Multivariate
 Statistics -- 5.5.1 Multivariate Gaussian Distribution -- 5.5.2 Gaussian
 Mixture Models -- 5.6 Stochastic Processes -- 5.6.1 Stationary
 Processes -- 5.6.2 AutoCorrelation and AutoCovariance Functions --
 5.6.3 CrossCorrelation and CrossCovariance Functions -- 5.6.4
 Markov Processes -- 5.6.5 Multivariate Stochastic Processes -- 5.7
 Estimation of Statistical Quantities by Time Averages -- 5.7.1 Ergodic
 Processes -- 5.7.2 ShortTime Stationary Processes -- 5.8 Power
 Spectrum and its Estimation -- 5.8.1 White Noise -- 5.8.2 The
 Periodogram -- 5.8.3 Smoothed Periodograms -- 5.8.3.1 Non
 Recursive Smoothing in Time -- 5.8.3.2 Recursive Smoothing in Time
 -- 5.8.3.3 LogMel Filter Bank Features -- 5.8.4 Power Spectra and
 Linear ShiftInvariant Systems -- 5.9 Statistical Properties of Speech
 Signals -- 5.10 Statistical Properties of DFT Coefficients -- 5.10.1
 Asymptotic Statistical Properties -- 5.10.2 SignalPlusNoise Model --
 5.10.3 Statistics of DFT Coefficients for Finite Frame Lengths -- 5.11
 Optimal Estimation -- 5.11.1 MMSE Estimation -- 5.11.2 Estimation of
 Discrete Random Variables -- 5.11.3 Optimal Linear Estimator --
 5.11.4 The Gaussian Case -- 5.11.5 Joint Detection and Estimation --
 5.12 NonLinear Estimation with Deep Neural Networks -- 5.12.1 Basic
 Network Components -- 5.12.1.1 The Perceptron -- 5.12.1.2

Convolutional Neural Network -- 5.12.2 Basic DNN Structures --
5.12.2.1 FullyConnected FeedForward Network -- 5.12.2.2
Autoencoder Networks -- 5.12.2.3 Recurrent Neural Networks --
5.12.2.4 Time Delay, Wavenet, and Transformer Networks.
5.12.2.5 Training of Neural Networks -- 5.12.2.6 Stochastic Gradient
Descent (SGD) -- 5.12.2.7 Adaptive Moment Estimation Method (ADAM)
-- References -- Chapter 6 Linear Prediction -- 6.1 Vocal Tract Models
and ShortTerm Prediction -- 6.1.1 AllZero Model -- 6.1.2 AllPole
Model -- 6.1.3 PoleZero Model -- 6.2 Optimal Prediction Coefficients
for Stationary Signals -- 6.2.1 Optimum Prediction -- 6.2.2 Spectral
Flatness Measure -- 6.3 Predictor Adaptation -- 6.3.1 BlockOriented
Adaptation -- 6.3.1.1 AutoCorrelation Method -- 6.3.1.2 Covariance
Method -- 6.3.1.3 Levinson-Durbin Algorithm -- 6.3.2 Sequential
Adaptation -- 6.4 LongTerm Prediction -- References -- Chapter 7
Quantization -- 7.1 Analog Samples and Digital Representation -- 7.2
Uniform Quantization -- 7.3 Nonuniform Quantization -- 7.4 Optimal
Quantization -- 7.5 Adaptive Quantization -- 7.6 Vector Quantization
-- 7.6.1 Principle -- 7.6.2 The Complexity Problem -- 7.6.3 Lattice
Quantization -- 7.6.4 Design of Optimal Vector Code Books -- 7.6.5
Gain-Shape Vector Quantization -- 7.7 Quantization of the Predictor
Coefficients -- 7.7.1 Scalar Quantization of the LPC Coefficients --
7.7.2 Scalar Quantization of the Reflection Coefficients -- 7.7.3 Scalar
Quantization of the LSF Coefficients -- References -- Chapter 8 Speech
Coding -- 8.1 SpeechCoding Categories -- 8.2 ModelBased Predictive
Coding -- 8.3 Linear Predictive Waveform Coding -- 8.3.1 FirstOrder
DPCM -- 8.3.2 OpenLoop and ClosedLoop Prediction -- 8.3.3
Quantization of the Residual Signal -- 8.3.3.1 Quantization with Open
Loop Prediction -- 8.3.3.2 Quantization with ClosedLoop Prediction --
8.3.3.3 Spectral Shaping of the Quantization Error -- 8.3.4 ADPCM with
Sequential Adaptation -- 8.4 Parametric Coding -- 8.4.1 Vocoder
Structures -- 8.4.2 LPC Vocoder -- 8.5 Hybrid Coding -- 8.5.1 Basic
Codec Concepts.
8.5.1.1 Scalar Quantization of the Residual Signal -- 8.5.1.2 Vector
Quantization of the Residual Signal -- 8.5.2 Residual Signal Coding:
REL P -- 8.5.3 Analysis by Synthesis: CELP -- 8.5.3.1 Principle --
8.5.3.2 Fixed Code Book -- 8.5.3.3 LongTerm Prediction, Adaptive
Code Book -- 8.6 Adaptive Postfiltering -- 8.7 Speech Codec
Standards: Selected Examples -- 8.7.1 GSM FullRate Codec -- 8.7.2
EFR Codec -- 8.7.3 Adaptive MultiRate Narrowband Codec (AMRNB) --
8.7.4 ITUT/G.722: 7kHz Audio Coding within 64 kbit/s -- 8.7.5
Adaptive MultiRate Wideband Codec (AMRWB) -- 8.7.6 Codec for
Enhanced Voice Services (EVS) -- 8.7.7 Opus Codec IETF RFC 6716 --
References -- Chapter 9 Concealment of Erroneous or Lost Frames --
9.1 Concepts for Error Concealment -- 9.1.1 Error Concealment by
Hard Decision Decoding -- 9.1.2 Error Concealment by Soft Decision
Decoding -- 9.1.3 Parameter Estimation -- 9.1.3.1 MAP Estimation --
9.1.3.2 MS Estimation -- 9.1.4 The A Posteriori Probabilities -- 9.1.4.1
The A Priori Knowledge -- 9.1.4.2 The Parameter Distortion
Probabilities -- 9.1.5 Example: Hard Decision vs. Soft Decision -- 9.2
Examples of Error Concealment Standards -- 9.2.1 Substitution and
Muting of Lost Frames -- 9.2.2 AMR Codec: Substitution and Muting of
Lost Frames -- 9.2.3 EVS Codec: Concealment of Lost Packets -- 9.3
Further Improvements -- References -- Chapter 10 Bandwidth
Extension of Speech Signals -- 10.1 BWE Concepts -- 10.2 BWE using
the Model of Speech Production -- 10.2.1 Extension of the Excitation
Signal -- 10.2.2 Spectral Envelope Estimation -- 10.2.2.1 Minimum
Mean Square Error Estimation -- 10.2.2.2 Conditional Maximum A
Posteriori Estimation -- 10.2.2.3 Extensions -- 10.2.2.4 Simplifications

-- 10.2.3 Energy Envelope Estimation -- 10.3 Speech Codecs with
Integrated BWE -- 10.3.1 BWE in the GSM FullRate Codec.
10.3.2 BWE in the AMR Wideband Codec.
