

1. Record Nr.	UNINA9910829861603321
Autore	Kent J. T (John T.)
Titolo	Spatial analysis // John T. Kent, Kanti V. Mardia
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley, , [2022] ©2022
ISBN	1-118-76356-4 1-118-76355-6
Descrizione fisica	1 online resource (403 pages)
Collana	Wiley Series in Probability and Statistics
Disciplina	001.422
Soggetti	Spatial analysis (Statistics)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- List of Figures -- List of Tables -- Preface -- List of Notation and Terminology -- Chapter 1 Introduction -- 1.1 Spatial Analysis -- 1.2 Presentation of the Data -- 1.3 Objectives -- 1.4 The Covariance Function and Semivariogram -- 1.4.1 General Properties -- 1.4.2 Regularly Spaced Data -- 1.4.3 Irregularly Spaced Data -- 1.5 Behavior of the Sample Semivariogram -- 1.6 Some Special Features of Spatial Analysis -- Exercises -- Chapter 2 Stationary Random Fields -- 2.1 Introduction -- 2.2 Second Moment Properties -- 2.3 Positive Definiteness and the Spectral Representation -- 2.4 Isotropic Stationary Random Fields -- 2.5 Construction of Stationary Covariance Functions -- 2.6 Matérn Scheme -- 2.7 Other Examples of Isotropic Stationary Covariance Functions -- 2.8 Construction of Nonstationary Random Fields -- 2.8.1 Random Drift -- 2.8.2 Conditioning -- 2.9 Smoothness -- 2.10 Regularization -- 2.11 Lattice Random Fields -- 2.12 Torus Models -- 2.12.1 Models on the Continuous Torus -- 2.12.2 Models on the Lattice Torus -- 2.13 Longrange Correlation -- 2.14 Simulation -- 2.14.1 General Points -- 2.14.2 The Direct Approach -- 2.14.3 Spectral Methods -- 2.14.4 Circulant Methods -- Exercises -- Chapter 3 Intrinsic and Generalized Random Fields -- 3.1 Introduction -- 3.2 Intrinsic Random Fields of Order $k \geq 0$ -- 3.3 Characterizations of Semivariograms -- 3.4 Higher Order Intrinsic Random Fields -- 3.5

Registration of Higher Order Intrinsic Random Fields -- 3.6 Generalized Random Fields -- 3.7 Generalized Intrinsic Random Fields of Intrinsic Order k_0 -- 3.8 Spectral Theory for Intrinsic and Generalized Processes -- 3.9 Regularization for Intrinsic and Generalized Processes -- 3.10 Self-Similarity -- 3.11 Simulation -- 3.11.1 General Points -- 3.11.2 The Direct Method -- 3.11.3 Spectral Methods. 3.12 Dispersion Variance -- Exercises -- Chapter 4 Autoregression and Related Models -- 4.1 Introduction -- 4.2 Background -- 4.3 Moving Averages -- 4.3.1 Lattice Case -- 4.3.2 Continuously Indexed Case -- 4.4 Finite Symmetric Neighborhoods of the Origin in Z^d -- 4.5 Simultaneous Autoregressions (SARs) -- 4.5.1 Lattice Case -- 4.5.2 Continuously Indexed Random Fields -- 4.6 Conditional Autoregressions (CARs) -- 4.6.1 Stationary CARs -- 4.6.2 Iterated SARs and CARs -- 4.6.3 Intrinsic CARs -- 4.6.4 CARs on a Lattice Torus -- 4.6.5 Finite Regions -- 4.7 Limits of CAR Models Under Fine Lattice Spacing -- 4.8 Unilateral Autoregressions for Lattice Random Fields -- 4.8.1 Halfspaces in Z^d -- 4.8.2 Unilateral Models -- 4.8.3 Quadrant Autoregressions -- 4.9 Markov Random Fields (MRFs) -- 4.9.1 The Spatial Markov Property -- 4.9.2 The Subset Expansion of the Negative Potential Function -- 4.9.3 Characterization of Markov Random Fields in Terms of Cliques -- 4.9.4 Automodels -- 4.10 Markov Mesh Models -- 4.10.1 Validity -- 4.10.2 Marginalization -- 4.10.3 Markov Random Fields -- 4.10.4 Usefulness -- Exercises -- Chapter 5 Estimation of Spatial Structure -- 5.1 Introduction -- 5.2 Patterns of Behavior -- 5.2.1 Onedimensional Case -- 5.2.2 Twodimensional Case -- 5.2.3 Nugget Effect -- 5.3 Preliminaries -- 5.3.1 Domain of the Spatial Process -- 5.3.2 Model Specification -- 5.3.3 Spacing of Data -- 5.4 Exploratory and Graphical Methods -- 5.5 Maximum Likelihood for Stationary Models -- 5.5.1 Maximum Likelihood Estimates-Known Mean -- 5.5.2 Maximum Likelihood Estimates-Unknown Mean -- 5.5.3 Fisher Information Matrix and Outfill Asymptotics -- 5.6 Parameterization Issues for the Matérn Scheme -- 5.7 Maximum Likelihood Examples for Stationary Models -- 5.8 Restricted Maximum Likelihood (REML) -- 5.9 Vecchia's Composite Likelihood. 5.10 REML Revisited with Composite Likelihood -- 5.11 Spatial Linear Model -- 5.11.1 MLEs -- 5.11.2 Outfill Asymptotics for the Spatial Linear Model -- 5.12 REML for the Spatial Linear Model -- 5.13 Intrinsic Random Fields -- 5.14 Infill Asymptotics and Fractal Dimension -- Exercises -- Chapter 6 Estimation for Lattice Models -- 6.1 Introduction -- 6.2 Sample Moments -- 6.3 The AR(1) Process on Z -- 6.4 Moment Methods for Lattice Data -- 6.4.1 Moment Methods for Unilateral Autoregressions (UARs) -- 6.4.2 Moment Estimators for Conditional Autoregression (CAR) Models -- 6.5 Approximate Likelihoods for Lattice Data -- 6.6 Accuracy of the Maximum Likelihood Estimator -- 6.7 The Moment Estimator for a CAR Model -- Exercises -- Chapter 7 Kriging -- 7.1 Introduction -- 7.2 The Prediction Problem -- 7.3 Simple Kriging -- 7.4 Ordinary Kriging -- 7.5 Universal Kriging -- 7.6 Further Details for the Universal Kriging Predictor -- 7.6.1 Transfer Matrices -- 7.6.2 Projection Representation of the Transfer Matrices -- 7.6.3 Second Derivation of the Universal Kriging Predictor -- 7.6.4 A Bordered Matrix Equation for the Transfer Matrices -- 7.6.5 The Augmented Matrix Representation of the Universal Kriging Predictor -- 7.6.6 Summary -- 7.7 Stationary Examples -- 7.8 Intrinsic Random Fields -- 7.8.1 Formulas for the Kriging Predictor and Kriging Variance -- 7.8.2 Conditionally Positive Definite Matrices -- 7.9 Intrinsic Examples -- 7.10 Square Example -- 7.11 Kriging with Derivative Information -- 7.12 Bayesian Kriging -- 7.12.1 Overview -- 7.12.2 Details for Simple Bayesian Kriging -- 7.12.3 Details for

Bayesian Kriging with Drift -- 7.13 Kriging and Machine Learning --
7.14 The Link Between Kriging and Splines -- 7.14.1 Nonparametric
Regression -- 7.14.2 Interpolating Splines -- 7.14.3 Comments on
Interpolating Splines -- 7.14.4 Smoothing Splines.
7.15 Reproducing Kernel Hilbert Spaces -- 7.16 Deformations --
Exercises -- Chapter 8 Additional Topics -- 8.1 Introduction -- 8.2
Lognormal Random Fields -- 8.3 Generalized Linear Spatial Mixed
Models (GLSMMs) -- 8.4 Bayesian Hierarchical Modeling and Inference
-- 8.5 Cokriging -- 8.6 Spatial-temporal Models -- 8.6.1 General
Considerations -- 8.6.2 Examples -- 8.7 Clamped Plate Splines -- 8.8
Gaussian Markov Random Field Approximations -- 8.9 Designing a
Monitoring Network -- Exercises -- Appendix A Mathematical
Background -- A.1 Domains for Sequences and Functions -- A.2
Classes of Sequences and Functions -- A.2.1 Functions on the Domain
 \mathbb{R}^d -- A.2.2 Sequences on the Domain \mathbb{Z}^d -- A.2.3 Classes of Functions
on the Domain S^1 -- A.2.4 Classes of Sequences on the Domain \mathbb{Z}^N ,
Where $N = \{1, \dots, d\}$ -- A.3 Matrix Algebra -- A.3.1
The Spectral Decomposition Theorem -- A.3.2 Moore-Penrose
Generalized Inverse -- A.3.3 Orthogonal Projection Matrices -- A.3.4
Partitioned Matrices -- A.3.5 Schur Product -- A.3.6 Woodbury Formula
for a Matrix Inverse -- A.3.7 Quadratic Forms -- A.3.8 Toeplitz and
Circulant Matrices -- A.3.9 Tensor Product Matrices -- A.3.10 The
Spectral Decomposition and Tensor Products -- A.3.11 Matrix
Derivatives -- A.4 Fourier Transforms -- A.5 Properties of the Fourier
Transform -- A.6 Generalizations of the Fourier Transform -- A.7
Discrete Fourier Transform and Matrix Algebra -- A.7.1 DFT in d
Dimension -- A.7.2 Properties of the Unitary Matrix G ,
 $d = 1$ -- A.7.3 Circulant Matrices and the DFT, $d = 1$
-- A.7.4 The Case $d > 1$ -- A.7.5 The Periodogram
-- A.8 Discrete Cosine Transform (DCT) -- A.8.1 Onedimensional Case
-- A.8.2 The Case $d > 1$ -- A.8.3 Indexing for the Discrete Fourier
and Cosine Transforms -- A.9 Periodic Approximations to Sequences.
A.10 Structured Matrices in d Dimension -- A.11
Matrix Approximations for an Inverse Covariance Matrix -- A.11.1 The
Inverse Covariance Function -- A.11.2 The Toeplitz Approximation to
 1 -- A.11.3 The Circulant Approximation to 1 -- A.11.4 The
Folded Circulant Approximation to 1 -- A.11.5 Comments on the
Approximations -- A.11.6 Sparsity -- A.12 Maximum Likelihood
Estimation -- A.12.1 General Considerations -- A.12.2 The Multivariate
Normal Distribution and the Spatial Linear Model -- A.12.3 Change of
Variables -- A.12.4 Profile Loglikelihood -- A.12.5 Confidence
Intervals -- A.12.6 Linked Parameterization -- A.12.7 Model Choice --
A.13 Bias in Maximum Likelihood Estimation -- A.13.1 A General Result
-- A.13.2 The Spatial Linear Model -- Appendix B A Brief History of the
Spatial Linear Model and the Gaussian Process Approach -- B.1
Introduction -- B.2 Matheron and Watson -- B.3 Geostatistics at Leeds
1977-1987 -- B.3.1 Courses, Publications, Early Dissemination -- B.
3.2 Numerical Problems with Maximum Likelihood -- B.4 Frequentist
vs. Bayesian Inference -- References and Author Index -- Index --
EULA.
