

1. Record Nr.	UNINA9910829878503321
Titolo	Transfusion medicine // edited by Jeffrey McCullough
Pubbl/distr/stampa	Hoboken, New Jersey : , : John Wiley & Sons, Incorporated, , [2021] ©2021
ISBN	1-119-59956-3 1-119-59958-X 1-119-59955-5
Edizione	[5th ed.]
Descrizione fisica	1 online resource (595 pages) : illustrations
Disciplina	615.39
Soggetti	Blood banks - organization & administration Blood - Transfusion Blood donors
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Contents -- Contributors -- Preface -- Chapter 1 History -- 1.1 Ancient times -- 1.2 The period 1500-1700 -- 1.3 The 1800s -- 1.4 First transfusions in the United States -- 1.5 The discovery of blood groups -- 1.6 Anticoagulation -- 1.7 Modern blood banking and blood banks -- 1.8 Cadaver blood -- 1.9 The Rh blood group system and prevention of Rh immunization -- 1.10 Coombs and antiglobulin serum -- 1.11 Plasma and the blood program during World War II -- 1.12 Plastic bags and blood components -- 1.13 Cryoprecipitate and factor VIII -- 1.14 Red cell preservation -- 1.15 Leukocyte antigens and antibodies -- 1.16 Platelet collection, storage, and transfusion -- 1.17 Apheresis -- 1.18 Granulocyte transfusions -- 1.19 Summary -- References -- Chapter 2 The Blood Supply -- 2.1 Worldwide blood supply -- US blood supply -- 2.2 Amount of blood collected -- Platelet production -- Plasma production for transfusion -- 2.3 Management of the blood supply -- 2.4 Other activities of community blood centers -- 2.5 The plasma collection system -- Plasma definitions -- Federally licensed plasma collection and manufacturing organizations -- Plasma collection activity -- 2.6 Nongovernmental blood bank organizations -- AABB,

formerly the American Association of Blood Bank -- America's Blood Centers -- Plasma Protein Therapeutics Association -- 2.7 World Health Organization -- 2.8 Federation of Red Cross and Red Crescent Societies -- 2.9 International Society for Blood Transfusion -- 2.10 Regulation of the blood supply system -- US Federal Regulation -- Other required licensure -- Voluntary accreditation of blood banks -- College of American Pathologists Accreditation Program -- References -- Chapter 3 Recruitment of Blood Donors -- 3.1 Demographic characteristics of blood donors -- Gender -- Age -- Race/Ethnicity. Education and socioeconomic characteristics -- Employment -- Other social characteristics -- 3.2 Motivation of whole blood donors -- Psychosocial theories applicable to blood donation -- Integrated model -- Theory of planned behavior -- Giving and not giving -- 3.3 The donation experience and factors that influence continued donation -- Social influences on blood donation and social media -- Family history of donation or blood use -- The donation situation -- Organizational influences -- Role of incentives -- 3.4 Whole blood donor recruitment strategies -- 3.5 Apheresis donor recruitment -- 3.6 Bone marrow donors -- References -- Chapter 4 Blood Donor Medical Assessment, Collection, and Complications -- 4.1 Blood collection -- 4.2 Medical assessment of whole blood donors -- Registration -- Obtaining medical history -- Patients with hemochromatosis as blood donors -- Physical examination of the blood donor -- Special blood donations -- 4.3 Collection of whole blood -- Labeling -- Blood bags -- Anticoagulant preservative solutions -- Selection of the vein and preparation of the venipuncture site -- Venipuncture -- Blood collection -- 4.4 Postdonation care and adverse reactions to blood donation -- Postdonation care -- Adverse reactions -- Severe reactions to blood donation -- Seizures -- Nerve injuries -- Hematoma, arterial puncture, and thrombosis -- 4.5 Therapeutic bleeding -- 4.6 Medical assessment of apheresis donors -- General assessment -- Plateletpheresis donors -- Red cell loss -- Blood volume shifts -- Potential complications of serial donations -- Platelet depletion -- Leukapheresis donors -- Plasmapheresis donors -- Allogeneic donors for hematopoietic cell transplantation -- Physical examination of apheresis donors -- 4.7 Adverse reactions in apheresis donors -- General -- Vasovagal reactions -- Anticoagulation -- Citrate toxicity. Circulatory effects -- Air embolus -- Hematoma -- Mechanical hemolysis -- Platelet depletion or damage -- Lymphocyte depletion -- Complications unique to granulocyte donation -- Complications unique to plasmapheresis -- Complications unique to mononuclear cell apheresis for collection of peripheral blood stem cells -- References -- Chapter 5 Preparation, Storage, and Characteristics of Whole Blood, Blood Components, and Plasma Derivatives -- 5.1 Whole blood preparation and storage -- 5.2 Preparation of blood components from whole blood -- Anticoagulant-preservative solutions -- Blood processing for the preparation of components -- Red blood cells -- Frozen or deglycerolized red blood cells -- Leukocyte-reduced red blood cells -- Fresh frozen plasma -- Liquid plasma (never frozen) -- 5.3 Cryoprecipitate -- Description of component -- Thawing -- 5.4 Platelet concentrates-whole blood -- Description of component -- 5.5 Granulocytes -- 5.6 Irradiation of blood components -- 5.7 Hematopoietic stem and progenitor cells -- 5.8 Plasma derivatives -- General -- Coagulation factor concentrates -- Fibrinogen -- Immune serum globulins -- 5.9 Pathogen-inactivated blood components -- Solvent-detergent plasma (Octaplas) -- Fresh frozen plasma -- Platelets -- Red cells -- 5.10 Universal red cells -- Enzymatic cleavage of ABO and Rh antigen -- Masking ABO antigens -- 5.11 Blood

substitutes -- Potential clinical uses and impact of hemoglobin
substitutes -- References -- Chapter 6 Production of Components by
Apheresis -- 6.1 Apheresis instruments -- Fresenius Kabi Amicus
Separator -- Fresenius Kabi Alyx -- Terumo Trima Accel --
Haemonetics Instruments -- 6.2 Plateletpheresis -- Single-donor
platelet concentrates -- Function and storage of platelets obtained by
apheresis -- 6.3 Erythrocytapheresis -- 6.4 Leukapheresis
for the collection of granulocytes.

Hydroxyethyl starch in leukapheresis -- Stimulation of donors with
corticosteroid or G-CSF prior to leukapheresis -- Filtration
leukapheresis -- Function of granulocytes obtained by leukapheresis
-- Storage of granulocytes for transfusion -- Donor-recipient matching
for granulocyte transfusion -- 6.5 Leukapheresis for the collection
of mononuclear cells -- 6.6 Leukapheresis for the collection
of peripheral blood stem cells -- Collection procedures -- Effects
of peripheral blood stem cell collection on normal donors --
Characteristics of the peripheral blood stem cell concentrates --
Quality control of peripheral blood stem cell concentrates -- Storage
of peripheral blood stem cells -- 6.7 Donor selection

and complications of cytapheresis in normal donors -- 6.8
Plasmapheresis and source plasma -- References -- Chapter 7
Laboratory Testing of Donated Blood -- 7.1 Background -- 7.2 Safety
of the blood supply -- 7.3 Blood component testing -- ABO typing --
Rh typing -- Red blood cell antibody detection -- ABO antibody titers
-- Direct antiglobulin testing -- 7.4 Testing for transmissible diseases
-- General concepts of infectious disease testing -- Testing
in resource-limited settings -- Managing the results of infectious
disease testing -- HIV testing -- Hepatitis B testing -- Hepatitis C
testing -- Human T-cell lymphotropic virus testing -- West Nile virus
testing -- Zika virus testing -- Testing for babesiosis -- Syphilis
testing -- Chagas' disease testing -- Cytomegalovirus testing --
Bacterial testing of platelets -- 7.5 Other laboratory testing -- HLA
antibody testing -- Extended blood group antigen typing -- Role
of platelet antigen typing -- Role of platelet serology -- Parvovirus
and hepatitis A virus testing -- Hemoglobin S testing -- Screening
donors for IgA deficiency -- 7.6 Summary -- References -- Chapter 8
Blood Groups.

8.1 Red blood cell antigens and groups -- 8.2 ABO system -- Genes
and composition -- A and B subgroups -- Bombay type -- Antigen
distribution and subgroups -- Antibodies of the ABH system -- 8.3 The
Rh system -- Discovery -- Nomenclature and genetics -- Structure
and composition of the D antigen -- Weak D, D variant, Du, and partial
D -- Rh null type -- Rh antibodies -- 8.4 Other red cell blood groups
-- Kell system -- Duffy system -- Kidd system -- Lutheran system --
MNSs system -- P system -- Lewis system -- LW system -- Diego (Di)
-- Cartwright (Yt) -- XG system -- Dombrock (Do) -- Scianna (Sc) --
Colton (Co) -- Rogers (Rg) and Chido (Ch) -- Gerbich (Ge) -- Cromer
(Cr) -- Knops (Kn) -- Indian (In) -- OK system -- RAPH system -- JMH
system -- GIL -- Ii blood group antigens -- Human leukocyte antigen
-- 8.5 Antibodies to red cell antigens -- 8.6 Function of molecules
containing red cell antigens -- Red cell structure -- Red cell function
-- Receptors and adhesion molecules -- Transport protein --
Complement regulatory molecules -- Enzymatic activity -- Microbial
receptor -- 8.7 Platelets -- 8.8 Granulocytes -- References -- Chapter
9 Laboratory Detection of Blood Groups and Provision of Red Cells --
9.1 Immunologic mechanisms of red cell destruction -- 9.2 Methods
of detecting red cell antibody-antigen reactions -- Factors that affect
agglutination -- Direct agglutination -- Techniques to enhance red cell

antibody detection -- Techniques for detecting red cell antigen-antibody reactions -- 9.3 The antiglobulin test -- Anti-human globulin serum -- The indirect antiglobulin (indirect Coombs) test -- The direct antiglobulin (Coombs) test -- 9.4 Red cell compatibility testing -- Positive identification of recipient and blood sample -- Review of transfusion service records for results of previous testing of samples from the recipient.
Medication and Biologicals.
