

1. Record Nr.	UNINA9910829887303321
Titolo	Regulation of the eukaryotic cell cycle [[electronic resource]]
Pubbl/distr/stampa	Chichester ; ; New York, : Wiley, 1992
ISBN	1-282-34781-0 9786612347818 0-470-51432-9 0-470-51433-7
Descrizione fisica	1 online resource (302 p.)
Collana	Ciba Foundation symposium ; ; 170
Disciplina	574.87 574.87623
Soggetti	Cell cycle - Regulation Eukaryotic cells Cellular control mechanisms
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"A Wiley-Interscience publication."
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	REGULATION OF THE EUKARYOTIC CELL CYCLE; Contents; Introduction; G1 control in yeast and animal cells; Is START a switch?; cdc2 protein kinase: structure-function relationships; Activation of MPF in fission yeast; Regulation of p34cdc2 protein kinase activity by phosphorylation and cyclin binding; Cyclins and cdc2 kinases in Drosophila: genetic analyses in a higher eukaryote; Mitotic regulation in Aspergillus nidulans; Protein phosphatases and cell division cycle control; DNA replication and the cell cycle; DNA replication and progression through the cell cycle Cyclins A and B1 in the human cell cycleGeneral discussion I : The cyclin-dependent kinase family; Regulation of CYL/cyclin D genes by colony-stimulating factor 1; Cell cycle regulation of retinoblastoma protein phosphorylation; General discussion II : The role of mos in meiotic maturation; c-Src and mitosis; Final discussion; Index of contributors; Subject index
Sommario/riassunto	Comprised of the latest developments in cell cycle research, it analyzes the principles underlying the control of cell division. Offers a framework for future investigation, especially that aimed toward

understanding and treatment of cancer.
