

1. Record Nr.	UNINA9910829891503321
Autore	Szabo B. A (Barna Aladar), <1935->
Titolo	Finite element analysis : method, verification and validation / / Barna Szabo, Ivo Babuska
Pubbl/distr/stampa	Hoboken, New Jersey : , : John Wiley & Sons, Incorporated, , [2021] ©2021
ISBN	1-119-42646-4 1-119-42638-3 1-119-42647-2
Edizione	[Second edition.]
Descrizione fisica	1 online resource (387 pages)
Collana	Wiley Series in Computational Mechanics
Disciplina	620.00151535
Soggetti	Finite element method
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Preface to the second edition -- Preface to the first edition -- Preface -- About the companion website -- Chapter 1 Introduction to the finite element method -- 1.1 An introductory problem -- 1.2 Generalized formulation -- 1.2.1 The exact solution -- 1.2.2 The principle of minimum potential energy -- 1.3 Approximate solutions -- 1.3.1 The standard polynomial space -- 1.3.2 Finite element spaces in one dimension -- 1.3.3 Computation of the coefficient matrices -- 1.3.4 Computation of the right hand side vector -- 1.3.5 Assembly -- 1.3.6 Condensation -- 1.3.7 Enforcement of Dirichlet boundary conditions -- 1.4 Postsolution operations -- 1.4.1 Computation of the quantities of interest -- 1.5 Estimation of error in energy norm -- 1.5.1 Regularity -- 1.5.2 A priori estimation of the rate of convergence -- 1.5.3 A posteriori estimation of error -- 1.5.4 Error in the extracted QoI -- 1.6 The choice of discretization in 1D -- 1.6.1 The exact solution lies in $H^k(I)$, $k \in \mathbb{N}$ -- 1.6.2 The exact solution lies in $H^k(I)$, $k \in \mathbb{N}$ -- 1.7 Eigenvalue problems -- 1.8 Other finite element methods -- 1.8.1 The mixed method -- 1.8.2 Nitsche's method -- Chapter 2 Boundary value problems -- 2.1 Notation -- 2.2 The scalar elliptic boundary value problem -- 2.2.1 Generalized formulation -- 2.2.2 Continuity -- 2.3 Heat conduction -- 2.3.1 The differential equation -- 2.3.2 Boundary

and initial conditions -- 2.3.3 Boundary conditions of convenience --
2.3.4 Dimensional reduction -- 2.4 Equations of linear
elasticity - strong form -- 2.4.1 The Navier equations -- 2.4.2
Boundary and initial conditions -- 2.4.3 Symmetry, antisymmetry and
periodicity -- 2.4.4 Dimensional reduction in linear elasticity -- 2.4.5
Incompressible elastic materials -- 2.5 Stokes flow -- 2.6 Generalized
formulation of problems of linear elasticity.
2.6.1 The principle of minimum potential energy -- 2.6.3 The principle
of virtual work -- 2.6.4 Uniqueness -- 2.7 Residual stresses -- 2.8
Chapter summary -- Chapter 3 Implementation -- 3.1 Standard
elements in two dimensions -- 3.2 Standard polynomial spaces --
3.2.1 Trunk spaces -- 3.2.2 Product spaces -- 3.3 Shape functions --
3.3.1 Lagrange shape functions -- 3.3.2 Hierarchic shape functions --
3.4 Mapping functions in two dimensions -- 3.4.1 Isoparametric
mapping -- 3.4.2 Mapping by the blending function method -- 3.4.3
Mapping algorithms for high order elements -- 3.5 Finite element
spaces in two dimensions -- 3.6 Essential boundary conditions -- 3.7
Elements in three dimensions -- 3.7.1 Mapping functions in three
dimensions -- 3.8 Integration and differentiation -- 3.8.1 Volume and
area integrals -- 3.8.2 Surface and contour integrals -- 3.8.3
Differentiation -- 3.9 Stiffness matrices and load vectors -- 3.9.1
Stiffness matrices -- 3.9.2 Load vectors -- 3.10 Postsolution
operations -- 3.11 Computation of the solution and its first derivatives
-- 3.12 Nodal forces -- 3.12.1 Nodal forces in the hversion -- 3.12.2
Nodal forces in the pversion -- 3.12.3 Nodal forces and stress
resultants -- 3.13 Chapter summary -- Chapter 4 Pre and
postprocessing procedures and verification -- 4.1 Regularity in two and
three dimensions -- 4.2 The Laplace equation in two dimensions --
4.2.1 2D model problem, uEXHk(),k1< -- p -- 4.2.2 2D model
problem, uEXHk(),k1p -- 4.2.3 Computation of the flux vector in
a given point -- 4.2.4 Computation of the flux intensity factors --
4.2.5 Material interfaces -- 4.3 The Laplace equation in three
dimensions -- 4.4 Planar elasticity -- 4.4.1 Problems of elasticity on an
Lshaped domain -- 4.4.2 Crack tip singularities in 2D -- 4.4.3 Forcing
functions acting on boundaries -- 4.5 Robustness.
4.6 Solution verification -- Chapter 5 Simulation -- 5.1 Development of
a very useful mathematical model -- 5.1.1 The BernoulliEuler beam
model -- 5.1.2 Historical notes on the BernoulliEuler beam model --
5.2 Finite element modeling and numerical simulation -- 5.2.1
Numerical simulation -- 5.2.2 Finite element modeling -- 5.2.3
Calibration versus tuning -- 5.2.4 Simulation governance -- 5.2.5
Milestones in numerical simulation -- 5.2.6 Example: The Girkmann
problem -- 5.2.7 Example: Fastened structural connection -- 5.2.8
Finite element model -- 5.2.9 Example: Coil spring with displacement
boundary conditions -- 5.2.10 Example: Coil spring segment --
Chapter 6 Calibration, validation and ranking -- 6.1 Fatigue data --
6.1.1 Equivalent stress -- 6.1.2 Statistical models -- 6.1.3 The effect of
notches -- 6.1.4 Formulation of predictors of fatigue life -- 6.2 The
predictors of Peterson and Neuber -- 6.2.1 The effect of
notches - calibration -- 6.2.2 The effect of notches - validation --
6.2.3 Updated calibration -- 6.2.4 The fatigue limit -- 6.2.5 Discussion
-- 6.3 The predictor G -- 6.3.1 Calibration of (V,) -- 6.3.2 Ranking
-- 6.3.3 Comparison of G with Peterson's revised predictor -- 6.4
Biaxial test data -- 6.4.1 Axial, torsional and combined inphase
loading -- 6.4.2 The domain of calibration -- 6.4.3 Outofphase
biaxial loading -- 6.5 Management of model development -- 6.5.1
Obstacles to progress -- Chapter 7 Beams, plates and shells -- 7.1
Beams -- 7.1.1 The Timoshenko beam -- 7.1.2 The BernoulliEuler

beam -- 7.2 Plates -- 7.2.1 The ReissnerMindlin plate -- 7.2.2 The Kirchhoff plate -- 7.2.3 The transverse variation of displacements -- 7.3 Shells -- 7.3.1 Hierarchic thin solid models -- 7.4 Chapter summary -- Chapter 8 Aspects of multiscale models -- 8.1 Unidirectional fiberreinforced laminae.
8.1.1 Determination of material constants -- 8.1.2 The coefficients of thermal expansion -- 8.1.3 Examples -- 8.1.4 Localization -- 8.1.5 Prediction of failure in composite materials -- 8.1.6 Uncertainties -- 8.2 Discussion -- Chapter 9 Nonlinear models -- 9.1 Heat conduction -- 9.1.1 Radiation -- 9.1.2 Nonlinear material properties -- 9.2 Solid mechanics -- 9.2.1 Large strain and rotation -- 9.2.2 Structural stability and stress stiffening -- 9.2.3 Plasticity -- 9.2.4 Mechanical contact -- 9.3 Chapter summary -- Appendix A Definitions -- A.1 Normed linear spaces, linear functionals and bilinear forms -- A.1.1 Normed linear spaces -- A.1.2 Linear forms -- A.1.3 Bilinear forms -- A.2 Convergence in the space X -- A.2.1 The space of continuous functions -- A.2.2 The space $L^p()$ -- A.2.3 Sobolev space of order 1 -- A.2.4 Sobolev spaces of fractional index -- A.3 The Schwarz inequality for integrals -- Appendix B Proof of hconvergence -- Appendix C Convergence in 3D: Empirical results -- Appendix D Legendre polynomials -- D.1 Shape functions based on Legendre polynomials -- Appendix E Numerical quadrature -- E.1 Gaussian quadrature -- E.2 GaussLobatto quadrature -- Appendix F Polynomial mapping functions -- F.1 Interpolation on surfaces -- F.1.1 Interpolation on the standard quadrilateral element -- F.1.2 Interpolation on the standard triangle -- Appendix G Corner singularities in twodimensional elasticity -- G.1 The Airy stress function -- G.2 Stressfree edges -- G.2.1 Symmetric eigenfunctions -- G.2.2 Antisymmetric eigenfunctions -- G.2.3 The Lshaped domain -- G.2.4 Corner points -- Appendix H Computation of stress intensity factors -- H.1 Singularities at crack tips -- H.2 The contour integral method -- H.3 The energy release rate -- H.3.1 Symmetric (Mode I) loading -- H.3.2 Antisymmetric (Mode II) loading.
H.3.3 Combined (Mode I and Mode II) loading -- H.3.4 Computation by the stiffness derivative method -- Appendix I Fundamentals of data analysis -- I.1 Statistical foundations -- I.2 Test data -- I.3 Statistical models -- I.4 Ranking -- I.5 Confidence intervals -- Appendix J Estimation of fastener forces in structural connections -- Appendix K Useful algorithms in solid mechanics -- K.1 The traction vector -- K.2 Transformation of vectors -- K.3 Transformation of stresses -- K.4 Principal stresses -- K.5 The von Mises stress -- K.6 Statically equivalent forces and moments -- K.6.1 Technical formulas for stress -- Bibliography -- Index -- EULA.

Sommario/riassunto

"Finite Element Analysis: Method, Verification and Validation, Second Edition comprehensively covers the theoretical foundation of the finite element method with particular focus on the fundamentals of verification, validation and uncertainty quantification. It illustrates the techniques and procedures of quality assurance in numerical simulation through examples and exercises and describes the technical requirements for the formulation and application of design rules. Finite Element Analysis: Method, Verification and Validation, Second Edition bridges the gap between theory and numerical results in a unique and accessible way and is accompanied by a website hosting a solutions manual, powerpoint slides for instructors and a link to finite element software"--
