1. Record Nr. UNINA9910829928503321

Autore	Moir Ian
Titolo	Military avionics systems / / I. Moir, A. G. Seabridge, Malcolm Jukes
Pubbl/distr/stampa	New York, : John Wiley & Sons, 2005
ISBN	1-119-60100-2 0-470-03546-3 1-60119-066-2
Edizione	[1st edition.]
Descrizione fisica	1 online resource (xx, 520 pages) : illustrations (some color)
Collana	AIAA education series
Altri autori (Persone)	SeabridgeA. G (Allan G.) JukesMalcolm
Disciplina	623.74/6049
Soggetti	Avionics - Electronic equipment Airplanes, Military Electronics in military engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record. "Displays chapter contributed by Malcolm Jukes." "Copublished by American Institute of Aeronautics and Astronautics ... Reston, VA."
Nota di contenuto	""Military Avionics Systems""; ""Contents""; ""Series Preface""; ""Acknowledgements""; ""About the Authors""; ""Introduction""; ""1 Military Roles""; ""2 Technology and Architectures""; ""3 Basic Radar Systems""; ""4 Advanced Radar Systems""; ""5 Electrooptics""; ""6 Electronic Warfare""; ""7 Communications and Identification""; ""8 Navigation""; ""9 Weapons Carriage and Guidance""; ""10 Vehicle Management Systems""; ""11 Displays""; ""Bibliography""; ""Glossary""; ""Index""
Sommario/riassunto	Ian Moir and Allan Seabridge Military avionics is a complex and technically challenging field which requires a high level of competence from all those involved in the aircraft design and maintenance. As the various systems on board an aircraft evolve to become more and more inter-dependent and integrated, it is becoming increasingly important for designers to have a holistic view and knowledge of aircraft systems in order to produce an effective design for their individual components and effectively combine the systems involved. This book introduces the

military roles expected of aircraft types and describes the avionics systems required to fulfil these roles. These range from technology and architectures through to navigations systems, sensors, computing architectures and the human-machine interface. It enables students to put together combinations of systems in order to perform specific military roles. Sister volume to the authors' previous successful title 'Civil Avionics Systems' Covers a wide range of military aircraft roles and systems applications Offers clear and concise system descriptions Includes case studies and examples from current projects Features full colour illustrations detailing aircraft display systems Military Avionics Systems will appeal to practitioners in the aerospace industry across many disciplines such as aerospace engineers, designers, pilots, aircrew, maintenance engineers, ground crew, navigation experts, weapons developers and instrumentation developers. It also provides a valuable reference source to students in the fields of systems and aerospace engineering and avionics.
