

1. Record Nr.	UNINA9910830010103321
Titolo	Physicochemical kinetics and transport at biointerfaces [[electronic resource] /] / edited by Herman P. van Leeuwen, Wolfgang Koster
Pubbl/distr/stampa	Hoboken, NJ, : John Wiley, 2004
ISBN	1-280-26953-7 9786610269532 0-470-09403-6 0-470-09404-4
Descrizione fisica	1 online resource (573 p.)
Collana	IUPAC series on analytical and physical chemistry of environmental systems ; ; . v.9
Altri autori (Persone)	LeeuwenH. P. van KosterWolfgang
Disciplina	571.6/4 571.64
Soggetti	Biological interfaces Chemical kinetics Biological transport
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Physicochemical Kinetics and Transport at Biointerfaces; Contents; List of Contributors; Series Preface; Preface; 1 Physicochemical Kinetics and Transport at the Biointerface: Setting the Stage; 2 Molecular Modelling of Biological Membranes: Structure and Permeation Properties; 3 Biointerfaces and Mass Transfer; 4 Dynamics of Biouptake Processes: the Role of Transport, Adsorption and Internalisation; 5 Chemical Speciation of Organics and of Metals at Biological Interphases; 6 Transport of Solutes Across Biological Membranes: Prokaryotes 7 Transport of Solutes Across Biological Membranes in Eukaryotes: an Environmental Perspective 8 Transport of Colloids and Particles Across Biological Membranes; 9 Mobilisation of Organic Compounds and Iron by Microorganisms; 10 Critical Evaluation of the Physicochemical Parameters and Processes for Modelling the Biological Uptake of Trace Metals in Environmental (Aqueous) Systems; Index; Colour Plates
Sommario/riassunto	Part of the IUPAC Series on Analytical and Physical Chemistry of

Environmental Systems, this book collects and integrates current knowledge of the chemical mechanisms, kinetics, transport and interactions involved in processes at biological interfaces in environmental systems. Provides important, current knowledge for environmental scientists and related fieldsHighlights key directions for future researchFollows on from a previous title in the series, Metal Speciation and Bioavailability in Aquatic SystemsWritten by internationally renowned editors and authors Kin
