Sommario/riassunto   Digitalization of Work brings together researchers and international experts whose work and practices are based on a variety of disciplines such as work and organizational psychology, social psychology, ergonomics, communication and information sciences, and management sciences. This book closely examines the challenges associated with recent or emerging ways of working related to the digitalization of work. It acts as a directory of contributions that enrich recent thought and approaches to the deployment and accompaniment of the ways in which work is organized, including practices and environments likely to gain relevance in coming years (remote working and management, coworking for salaried employees, flexible office spaces, working from home and nomadism).
