Sommario/riassunto	This is the final report, drawing its conclusions and results from many individual papers and co-workers at the Institute for Structural Analysis of the Technical University of Braunschweig. It shows the correlation between energetic and mechanical quantities of face-centred cubic metals, cold worked and softened to different states. Constitutive models for the plastic of metals are developed and the application of these models is presented. The improvements achieved by this contribution cover the material functions, the shape of yield surfaces, and the consideration of distributed experimental data within the numerical analysis.

Sommario/riassunto

As Multilateral Development Banks increasingly gained influence in shaping global development, transnational social movements pushed to hold them accountable for their human rights impact towards communities. Leon Valentin Schettler presents a novel causal mechanism of movement advocacy towards MDBs, combining disruptive and conventional tactics. Systematically comparing the evolution of human rights standards and complaint mechanisms over the last three decades, he reveals how the combination of 1) declining US hegemony, 2) counter-mobilization by China and 3) movement cooptation by the World Bank bureaucracy led to a dilution of human rights accountability in the 2010s.
