Sommario/riassunto

Based on declassified materials from eight Ukrainian and Russian archives, *Stalin's Empire of Memory*, offers a complex and vivid analysis of the politics of memory under Stalinism. Using the Ukrainian republic as a case study, Serhy Yekelchuk elucidates the intricate interaction between the Kremlin, non-Russian intellectuals, and their audiences. Yekelchuk posits that contemporary representations of the past reflected the USSR's evolution into an empire with a complex hierarchy among its nations. In reality, he argues, the authorities never quite managed to control popular historical imagination or fully reconcile Russia's 'glorious past' with national mythologies of the non-Russian nationalities. Combining archival research with an innovative methodology that links scholarly and political texts with the literary works and artistic images, *Stalin's Empire of Memory* presents a lucid, readable text that will become a must-have for students, academics, and anyone interested in Russian history.

Sommario/riassunto

Describes the procedures for collection of samples, sample preparation, and analysis of CWC-related chemicals. It deals with analytical procedures that can be followed in well-equipped off-site laboratories (designated laboratories), as well as the on-site analytical procedures that the OPCW inspectors use in sample collection and preliminary analysis of the samples in field conditions. A one-of-a-kind, highly topical handbook for every expert in the chemical weapons field. Outlines the methods for analysing chemical weapons both on and off site.
