

1. Record Nr.	UNINA9910830497103321
Autore	Minoli Daniel <1952->
Titolo	High-density and de-densified smart campus communications : technologies, integration, implementation and applications / / Daniel Minoli, Jo-Anne Dressendofer
Pubbl/distr/stampa	Hoboken, New Jersey : , : John Wiley & Sons, Inc., , [2022] ©2022
ISBN	1-119-71608-X 1-119-71607-1 1-119-71606-3
Descrizione fisica	1 online resource (366 pages)
Disciplina	621.384
Soggetti	Wireless communication systems Smart materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Contents -- Preface -- About the Authors -- Acknowledgments -- Chapter 1 Background and Functional Requirements for High-Density Communications -- 1.1 BACKGROUND -- 1.2 REQUIREMENTS FOR HIGH-DENSITY COMMUNICATIONS -- 1.2.1 Pre-pandemic/Long-term Requirements for Airports -- 1.2.2 Pre-pandemic/Long-term Requirements for Stadiums -- 1.2.3 Pre-pandemic/Long-term Requirements for Convention Centers -- 1.2.4 Pre-pandemic/Long-term Requirements for Open Air Gatherings and Amusement Parks -- 1.2.5 Pre-pandemic/Long-term Requirements for Classrooms -- 1.2.6 Pre-pandemic/Long-term Requirements for Train and Subway Stations -- 1.2.7 Pre-pandemic/Long-term Requirements for Dense Office Environments -- 1.2.8 Ongoing Requirements for Dense Smart Warehouses and Distribution Centers -- 1.2.9 Pre-pandemic/Long-term Requirements for Dense Smart Cities -- 1.3 PANDEMIC-DRIVEN SOCIAL DISTANCING -- 1.3.1 Best Practices -- 1.3.2 Heuristic Density for the Pandemic Era -- 1.4 THE CONCEPT OF A WIRELESS SUPERNETWORK -- REFERENCES -- Chapter 2 Traditional WLAN

Technologies -- 2.1 OVERVIEW -- 2.2 WLAN STANDARDS -- 2.3 WLAN BASIC CONCEPTS -- 2.3.1 PHY Layer Operation -- 2.3.2 MAC Layer Operation -- 2.4 HARDWARE ELEMENTS -- 2.5 KEY IEEE 802.11ac MECHANISMS -- 2.5.1 Downlink Multi-User MIMO (DL-MU-MIMO) -- 2.5.2 Beamforming -- 2.5.3 Dynamic Frequency Selection -- 2.5.4 Space-Time Block Coding -- 2.5.5 Product Waves -- 2.6 BRIEF PREVIEW OF IEEE 802.11ax -- REFERENCES -- Chapter 3 Traditional DAS Technologies -- 3.1 OVERVIEW -- 3.2 FREQUENCY BANDS OF CELLULAR OPERATION -- 3.2.1 Traditional RF Spectrum -- 3.2.2 Citizens Broadband Radio Service (CBRS) -- 3.2.3 Freed-up Satellite C-Band -- 3.2.4 5G Bands -- 3.2.5 Motivations for Additional Spectrum -- 3.2.6 Private LTE/Private CBRS -- 3.2.7 5G Network Slicing -- 3.2.8 Supportive Technologies.

Sommario/riassunto

"High-density campus communications have traditionally been important in many environments, including airports; stadiums; convention centers; shopping malls; classrooms; hospitals; cruise ships; train and subway stations; evangelical megachurches; large multiple dwelling units; boardwalks; (special events in) parks; dense smart cities; and other venues. These communications span several domains: people-to-people, people-to-websites, people-to-applications, sensors-to-cloud analytics, and machines-to-machines/device-to-device. While the later Internet of Things (IoT) applications are generally (but not always) low speed, the former applications are typically high-speed. In many settings, people access videos (a la Over The Top [OTT] mode) or websites and applications that often include short videos or other high data-rate content. Deploying optimally-performing high-density campus communication systems is desired and required in many cases, but it can, at the same time, be a complex task to undertake successfully."--
