1. Record Nr. UNINA9910830508003321

Titolo	Case studies in reliability and maintenance [[electronic resource] /] / edited by Wallace R. Blischke, D.N. Prabhakar Murthy
Pubbl/distr/stampa	Hoboken, NJ, : John Wiley, 2003
ISBN	1-280-36628-1 9786610366286 0-470-23275-7 0-471-45873-2 0-471-39300-2
Descrizione fisica	1 online resource (691 p.)
Collana	Wiley series in probability and statistics
Altri autori (Persone)	BlischkeW. R. <1934-> MurthyD. N. P
Disciplina	620.00452 620/.00452
Soggetti	Reliability (Engineering) Maintainability (Engineering)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Case Studies in Reliability and Maintenance; Contents; Contributors; Preface; 1. Introduction and Overview; 1.1. Introduction; 1.2. Reliability, Maintenance, Maintainability, and Quality; 1.3. History of Reliability and Maintainability; 1.4. Applications; 1.5. Life Cycle Concepts; 1.6. Tools and Techniques for the Study of Reliability; 1.7. Reliability and Maintenance Data and Analysis; 1.8. Issues in Reliability and Maintenance; 1.9. Case Studies: An Overview; References; PART A. CASES WITH EMPHASIS ON PRODUCT DESIGN; 2. Space Interferometer Reliability-Based Design Evaluation 2.1. Introduction 2.2. Problem Description; 2.3. Alternative Optical Interferometer Designs; 2.4. Evaluation of Alternative Designs; 2.5. Interpretations, Conclusions, and Extensions; References; Exercises; Acronyms; 3. Confidence Intervals for Hardware Reliability Predictions; 3.1. Introduction; 3.2. Approach; 3.3. Problem Description; 3.4. Reliability Modeling; 3.5. Subassembly Hardware Reliability Prediction; 3.6. Construction of Component Failure Rate Database; 3.7. Comparing

Field Reliability Results with Predictions; 3.8. Implementation; 3.9. Conclusions; References; Exercises
4. Allocation of Dependability Requirements in Power Plant Design 4.1. Introduction; 4.2. System Characterization; 4.3. Modeling Dependability and Requirements; 4.4. Allocation of Requirements; 4.5. Continued Allocation in the Fault Tree; 4.6. Conclusions; References; Exercises; PART B. CASES WITH EMPHASIS ON DEVELOPMENT AND TESTING; 5. The Determination of the Design Strength of Granite Used as External Cladding for Buildings; 5.1. Introduction; 5.2. Properties of Granite; 5.3. Reliability Criteria; 5.4. Current Practices; 5.5. Case Study; 5.6. Conclusions; References; Exercises
Appendix A. Rosa Antico Data Appendix B. White Berrocal Data; 6. Use of Sensitivity Analysis to Assess the Effect of Model Uncertainty in Analyzing Accelerated Life Test Data; 6.1. Introduction; 6.2. Weibull Distribution and Initial Data Analysis; 6.3. Response Surface Model Analysis; 6.4. Effect of Stroke Displacement on Spring Life; 6.5. Concluding Remarks; References; Exercises; Appendix A. SPLIDA Commands for the Analyses; Appendix B. Spring-Accelerated Life Test Data; 7. Virtual Qualification of Electronic Hardware; 7.1. Introduction; 7.2. Automotive Module Case Study; 7.3. Summary
References Exercises; 8. Development of a Moisture Soak Model for Surface-Mounted Devices; 8.1. Introduction; 8.2. Experimental Procedure and Results; 8.3. The Moisture Soak Model; 8.4. Discussion; References; Exercises; 9. Construction of Reliable Software in Resource-Constrained Environments; 9.1. Introduction; 9.2. Constrained Development; 9.3. Model and Metrics; 9.4. Case Studies; 9.5. Summary; References; Exercises; 10. Modeling and Analysis of Software System Reliability; 10.1. Introduction; 10.2. NHPP Software Reliability Growth Models; 10.3. Case Study; 10.4. Problems and Alternatives
10.5. Case Study (Continued)

Sommario/riassunto

Introducing a groundbreaking companion book to a bestselling reliability text Reliability is one of the most important characteristics defining the quality of a product or system, both for the manufacturer and the purchaser. One achieves high reliability through careful monitoring of design, materials and other input, production, quality assurance efforts, ongoing maintenance, and a variety of related decisions and activities. All of these factors must be considered in determining the costs of production, purchase, and ownership of a product. Case Studies in Reliability
