Titolo	Advances in hyperspectral image processing techniques / / edited by Chein-I Chang
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley : , : IEEE Press, , [2023] ©2023
ISBN	1-119-68778-0 1-119-68775-6 1-119-68777-2
Descrizione fisica	1 online resource (611 pages)
Collana	IEEE Press
Disciplina	771
Soggetti	Hyperspectral imaging Image processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Contents -- Editor Biography -- List of Contributors -- Preface -- Part I General Theory -- Chapter 1 Introduction: Two Fundamental Principles Behind Hyperspectral Imaging -- 1.1 Introduction -- 1.2 Why Is Hyperspectral Imaging? -- 1.3 Two Principles for Hyperspectral Imaging -- 1.3.1 Pigeon-Hole Principle -- 1.3.2 Orthogonality Principle -- 1.4 What Are the Issues of Hyperspectral Imaging? -- 1.5 Determination of p by Virtual Dimensionality via Pigeon-Hole Principle -- 1.6 Order Determination of Low Rank and Sparse Matrices by Virtual Dimensionality via Pigeon-Hole Principle -- 1.7 Band Selection by Pigeon-Hole Principle -- 1.8 Band Selection by a Hyperspectral Band Channel via Pigeon-Hole Principle -- 1.9 Band Sampling via Pigeon-Hole Principle -- 1.10 Spectral Unmixing via Orthogonality Principle -- 1.11 Target Detection by Orthogonality Principle -- 1.11.1 ATGP -- 1.11.1.1 Automatic Target Generation Process (ATGP) -- 1.11.2 Constrained Energy Minimization (CEM) -- 1.12 Anomaly Detection by Orthogonality Principle -- 1.13 Endmember Finding by Orthogonality Principle -- 1.13.1 Pixel Purity Index (PPI) -- 1.13.2 Vertex Component Analysis (VCA) -- 1.13.3 Simplex Growing Algorithm (SGA) -- 1.14 Low Rank

Sommario/riassunto

"This book is derived from recent development of hyperspectral imaging (HSI) techniques in the field. Many new ideas have been explored and have led in various new directions in the past a few years. The book's content is based on the expertise of invited scholars and is categorized into six parts. Part I describes hyperspectral data unmixing (4 chapters). Part II spans topics from hyperspectral target detection to hyperspectral image classification (8 chapters). Part III explains band selection for HSI (4 chapters). Part IV covers compressive sensing for HSI (2 chapters). Part V pertains to fusion for HSI (5 chapters)."--
