

1. Record Nr.	UNINA9910830564603321
Titolo	Enzymatic and chemical synthesis of nucleic acid derivatives / / edited by Jesus Fernandez-Lucas, Maria-Jose Camarasa Rius
Pubbl/distr/stampa	Wienhem, Germany : , : Wiley-VCH Verlag, , 2019
ISBN	3-527-81207-5 3-527-81209-1 3-527-81210-5
Edizione	[1st ed.]
Descrizione fisica	1 online resource (351 pages)
Disciplina	574.8732
Soggetti	Nucleic acids - Synthesis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Preface -- Chapter 1 Enzymatic Synthesis of Nucleoside Analogues by Nucleoside Phosphorylases -- 1.1 Introduction -- 1.1.1 Nucleosides and Nucleoside Analogues -- 1.1.2 Enzymes Involved in the Enzymatic Synthesis of Nucleoside Analogues -- 1.2 Nucleoside Phosphorylases -- 1.2.1 Classification and Substrate Spectra of Nucleoside Phosphorylases -- 1.2.1.1 Nucleoside Phosphorylasel Family -- 1.2.1.2 Nucleoside Phosphorylasell Family -- 1.2.2 Limitations in the Current Classification -- 1.2.3 Reaction Mechanism -- 1.2.4 Domain Structure and Active Site Residues of Nucleoside Phosphorylases -- 1.2.4.1 NPI Family Members -- 1.2.4.2 NPll Family Members -- 1.3 Enzymatic Approaches to Produce Nucleoside Analogues Using Nucleoside Phosphorylases -- 1.3.1 Onepot TwoStep Transglycosylation Reaction -- 1.3.2 Pentofuranose1phosphate as Universal Glycosylating Substrate for Nucleoside Phosphorylase (NP) -- 1.3.2.1 Nucleoside Synthesis from Chemically Synthesized Pentose1P -- 1.3.2.2 Nucleosides Synthesis from dGlyceraldehyde3phosphate -- 1.3.2.3 Nucleoside Synthesis from dPentose -- 1.3.2.4 Nucleoside Synthesis from Enzymatically Produced Pentose1P -- 1.4 Approaches to Produce Nucleoside Analogues -- 1.4.1 Whole Cell Catalysis -- 1.4.2 Crude Enzyme Extract -- 1.4.3 Application of Purified Enzymes -- 1.4.3.1 Immobilized Enzymes -- 1.4.3.2 Enzyme Reactors -- 1.5

Upscaling Approaches for the Production of Nucleoside Analogues --
 1.6 Production of Pharmaceutically Active Compounds by Nucleoside
 Phosphorylases -- 1.7 Outlook for the Application of Nucleoside
 Phosphorylase in the Production of Nucleoside Analogues --
 References -- Chapter 2 Enzymatic Phosphorylation of Nucleosides --
 2.1 Introduction -- 2.2 Nonspecific Acid Phosphatases (NSAPs) -- 2.3
 Deoxyribonucleoside Kinases (dNKs) -- 2.4 Conclusion.
 References -- Chapter 3 Enzymatic Synthesis of Nucleic Acid
 Derivatives Using Whole Cells -- 3.1 Introduction -- 3.2 Nucleoside
 Synthesis Mediated by Microbial Nucleoside Phosphorylases -- 3.3
 Nucleoside Analogues Synthesis by the Combined Action of Microbial
 Nucleoside Phosphorylases and Other Enzymes -- 3.3.1 Nucleoside
 Phosphorylases Coupled to Deaminases -- 3.3.2 Nucleoside
 Phosphorylases Coupled to Phosphopentomutase -- 3.3.3 Nucleoside
 Phosphorylases Coupled to Phosphopentomutase and Other Enzymes
 -- 3.3.4 Nucleoside Phosphorylases Coupled to Other Enzymes -- 3.4
 Chemoenzymatic Preparation of Nonconventional Nucleoside
 Analogues Involving Whole Cell Biocatalyzed Key Steps -- 3.4.1 I
 Nucleosides -- 3.4.2 Carbocyclic Nucleosides -- 3.4.3 C Nucleosides
 -- 3.5 Nucleoside Prodrugs Preparation by Whole Cell Systems -- 3.5.1
 Acylnucleosides -- 3.5.2 Nucleoside Phosphates -- 3.6 Other
 Nucleoside Derivatives -- 3.6.1 NDP -- 3.6.2 NDPsugar -- 3.7
 Perspectives -- References -- Chapter 4 Enzymatic Synthesis of Nucleic
 Acid Derivatives by Immobilized Cells -- 4.1 Introduction -- 4.2
 Nucleic Acid Derivatives -- 4.3 Whole Cell Immobilization: Generalities
 -- 4.4 Synthesis of Nucleosides by Immobilized Cells -- 4.4.1 Natural
 Nucleoside Synthesis -- 4.4.2 Nucleoside Analogues Synthesis -- 4.4.3
 Nucleoside Analogues Derivatives Synthesis -- 4.5 Conclusion --
 References -- Chapter 5 Enzymatic Synthesis of Nucleic Acid
 Derivatives by Immobilized Enzymes -- 5.1 Introduction -- 5.2
 Immobilized Glycosyltransferases -- 5.2.1 Immobilized Nucleoside
 Phosphorylases -- 5.2.1.1 Stabilization of Nucleoside Phosphorylases
 by Immobilization -- 5.2.1.2 Synthesis of Nucleosides Catalyzed by
 Immobilized Nucleoside Phosphorylases -- 5.2.2 Immobilized
 Nucleoside 2'Deoxyribosyltransferases -- 5.2.2.1 Stabilization of
 Nucleoside 2'Deoxyribosyltransferases by Immobilization.
 5.2.2.2 Synthesis of Nucleosides Catalyzed by Immobilized 2'
 Deoxyribosyltransferases -- 5.2.3 Immobilized Nucleobase
 Phosphoribosyltransferases -- 5.3 Immobilized Nucleoside Oxidase --
 5.4 Immobilized Hydrolases -- 5.4.1 Immobilized Lipases -- 5.4.2
 Immobilized Proteases -- 5.4.3 Immobilized Esterases -- 5.4.4
 Immobilized Deaminases -- 5.4.5 Immobilized S
 Adenosylhomocysteine Hydrolases -- 5.5 Immobilized
 Phosphopentomutases -- 5.6 Immobilized Deoxyribonucleoside
 Kinases -- References -- Chapter 6 Synthesis of Nucleic Acid
 Derivatives by MultiEnzymatic Systems -- 6.1 MultiEnzymatic Systems
 in Biosynthesis -- 6.2 General Overview of MultiEnzymatic Synthesis of
 Nucleic Acid Derivatives -- 6.3 MultiEnzymatic Synthesis of
 Nucleosides and Their Derivatives -- 6.3.1 MultiEnzymatic Synthesis of
 Nucleosides and Their Analogues by Nucleoside Phosphorylase -- 6.3.2
 Transglycosylation Coupled with Xanthine Oxidase -- 6.3.3
 Transglycosylation Reactions Coupled with Deamination -- 6.3.4 ADase
 in Combination with Lipase -- 6.3.5 Esterification of Nucleosides --
 6.3.6 MultiEnzymatic Synthesis of Fluorine Nucleosides -- 6.3.7 Multi
 Enzymatic Synthesis of Nucleosides via R5P -- 6.3.8 Other Reactions --
 6.4 MultiEnzymatic Synthesis of Nucleotides and Their Derivatives --
 6.4.1 MultiEnzymatic Synthesis of NMPs and dNMPs -- 6.4.2 Multi
 Enzymatic Synthesis of NTPs and dNTPs -- 6.4.3 MultiEnzymatic

Synthesis of NDPSugars and Other NDP Derivatives -- 6.5 Conclusion
 -- References -- Chapter 7 Enzymatic Synthesis Using Polymerases of
 Modified Nucleic Acids and Genes -- 7.1 Introduction -- 7.2 Types of
 XNA Biomolecules -- 7.3 Enzymatic Synthesis of XNA and DNA
 Polymerases -- 7.4 BaseModified XNAs (BaseXNAs) -- 7.4.1
 Nucleobase Analogues -- 7.4.1.1 NonCanonical Nucleotides -- 7.4.1.2
 AminoacidLike Groups -- 7.4.1.3 Functional Tags -- 7.4.2 Unnatural
 Base Pairs.
 7.4.2.1 HydrogenBonding Base Pairs -- 7.4.2.2 Hydrophobic Base Pairs
 -- 7.5 SugarModified XNAs (SugarXNAs) -- 7.5.1 PentoseXNA --
 7.5.2 2'RiboseXNA -- 7.6 Phosphodiester BackboneXNA -- 7.7 A
 MirrorImage IDNA -- 7.8 Conclusions -- References -- Chapter 8
 Synthetic Approaches to the Fleximer Class of Nucleosides - A Historic
 Perspective -- 8.1 Distal Fleximers -- 8.1.1 Ribose Distal Fleximers --
 8.1.2 2'Deoxyribose Distal Fleximers -- 8.1.3 2'Modified Distal
 Fleximers -- 8.2 Proximal Fleximers -- 8.2.1 Ribose Proximal
 Fleximers -- 8.2.2 2'Deoxyribose Proximal Fleximers -- 8.2.3
 Carbocyclic Proximal Fleximers -- 8.2.4 Proximal Fleximers from Other
 Groups -- 8.3 "Reverse" Fleximers -- 8.4 Acyclic Fleximers -- 8.5
 Conclusion -- References -- Chapter 9 Synthesis of Oligonucleotides
 Carrying Nucleic Acid Derivatives of Biomedical and Structural Interest
 -- 9.1 Introduction -- 9.2 Oligonucleotides Carrying the DNA Lesion
 O6Alkylguanine -- 9.3 The Effect of Chemical Modifications in Non
 Canonical DNA Structures -- 9.3.1 TriplexForming Oligonucleotides --
 9.3.2 GquadruplexForming Oligonucleotides -- 9.3.3
 Oligonucleotides Forming iMotif Structures -- 9.4 Modified siRNAs for
 Gene Silencing -- 9.4.1 Modifications of the 3'Overhangs -- 9.4.2
 Modifications of the 5'End -- References -- Chapter 10 Synthesis of
 Carbohydrate-Oligonucleotide Conjugates and Their Applications --
 10.1 Introduction -- 10.2 Synthesis of COCs -- 10.2.1 OnSupport
 Synthesis -- 10.2.1.1 Phosphoramidite Chemistry -- 10.2.1.2
 Derivatization of Nucleoside Base Residues -- 10.2.1.3 Oximation
 Chemistry -- 10.2.1.4 Amide Chemistry -- 10.2.1.5 Urea Chemistry --
 10.2.1.6 CuAAC Chemistry -- 10.2.2 SolutionPhase Conjugation --
 10.2.2.1 Disulfide Formation -- 10.2.2.2 Nucleophilic Addition on
 Unsaturated Carbon -- 10.2.2.3 Carbonyl Addition-Elimination
 Reaction.
 10.2.2.4 CuAAC Chemistry -- 10.2.2.5 Diazocoupling Reaction --
 10.2.2.6 Amide Bond Formation -- 10.2.2.7 Enzymatic Incorporation of
 Saccharides or Nucleotides -- 10.3 Synthesis of Glycocluster
 Oligonucleotides -- 10.3.1 dsDNA Scaffolds -- 10.3.2 NonCanonical
 DNA Scaffolds (G4 and threeWay Junction) -- 10.3.3 Organic Spacer
 Scaffolds -- 10.3.4 Biomolecules as Scaffolds -- 10.4 Applications of
 COCs -- 10.4.1 Improving Cellular Uptake -- 10.4.2 Molecular
 Interactions Probes -- 10.4.3 Lectin Binding and Glycoarrays -- 10.5
 Outlook -- References -- Chapter 11 Advances in LightDirected
 Synthesis of HighDensity Microarrays and Extension to RNA and 2'F
 ANA Chemistries -- 11.1 Introduction -- 11.2 Phosphoramidite
 Chemistry Applied to the Photolithographic Synthesis of Microarrays --
 11.3 Recent Improvements in the Synthesis of DNA Microarrays -- 11.4
 Synthesis of RNA Microarrays -- 11.5 Enzymatic Approaches to RNA
 Array Synthesis -- 11.6 Synthesis of 2'FANA Microarrays -- 11.7
 Conclusion and Outlook -- References -- Chapter 12 SAMHD1
 Mediated Negative Regulation of Cellular dNTP Levels: HIV1, Innate
 Immunity, and Cancers -- 12.1 Cellular dNTP Concentrations -- 12.2
 SAMHD1 and Negative Regulation of Cellular dNTPs -- 12.3 SAMHD1
 Substrates, Activators, and Inhibitors -- 12.4 SAMHD1 and HIV1
 Reverse Transcription -- 12.5 SAMHD1 Mutations and Innate Immunity
