| Nota di contenuto       | Cover -- Title Page -- Copyright Page -- Contents -- Foreword by<br>Franz-Josef Ulm -- Foreword by Pierre Labbé -- List of Notations --<br>Introduction -- Chapter 1. Mechanisms of Deformation and Failure of<br>Concrete -- 1.1. Concrete: a material that is both widespread and<br>misunderstood -- 1.2. Composition and behavior of concrete at an<br>early age -- 1.2.1. Concrete curing -- 1.2.2. Consequences of curing<br>and phenomena related to the aging of concrete -- 1.3. Main aspects<br>of the mechanical behavior of concrete -- 1.3.1. Concrete under<br>uniaxial loading -- 1.3.2. Concrete under multiaxial loading -- Chapter<br>2. Damage Concept and Its Applicability to Concrete -- 2.1. Damage<br>concept -- 2.1.1. Miner cumulative damage law -- 2.1.2. Katchanov's<br>progressive damage law -- 2.1.3. Elasticity-damage coupling -- 2.2.<br>Theoretical bases of damage mechanics -- 2.2.1. Elasticity-damage<br>coupling -- 2.2.2. Isotropic damage theory -- 2.2.3. Damage threshold<br>and notion of loading surface -- Chapter 3. Damage Modeling -- 3.1.<br>Mazars models for monotonous loadings -- 3.1.1. Constitutive<br>equations -- 3.1.2. Using the model (uniaxial case) -- 3.1.3. Strengths<br>and weaknesses of the Mazars model -- 3.2. Model for cyclic loadings:<br>the $\dot{\epsilon}$ model -- 3.2.1. Concept of effective damage variable -- 3.2.2.<br>Constitutive equations -- 3.2.3. Response of the $\dot{\epsilon}$ model under various<br>types of loading -- 3.2.4. Adaptation of the $\dot{\epsilon}$ model to the case of |

confined loadings -- Chapter 4. Numerical Calculation of Damage --  
 4.1. Reminders on concepts governing the use of finite elements --  
 4.2. Principle flowcharts -- 4.2.1. Flowchart for the Mazars model --  
 4.2.2. Flowchart for the  $\dot{\epsilon}$  model -- 4.3. Data preparation -- 4.3.1.  
 Identification of modeling parameters -- 4.4. Concrete fracturing  
 energy -- 4.4.1. Intrinsic and extrinsic energy -- 4.4.2. Crack band  
 concept, Hillerborg regularization.  
 4.5. Non-local damage concept -- Chapter 5. Applications to Common  
 Reinforced Concrete Structural Elements Cases -- 5.1. 2D FE  
 calculation -- 5.1.1. Details of the experimental program -- 5.1.2.  
 Numerical processing -- 5.1.3. Results -- 5.2. Calculations by  
 Timoshenko enriched beam elements -- 5.2.1. Strengths and  
 weaknesses of the multifiber beam description -- 5.2.2. Bias of results  
 from the choice of material parameters -- 5.2.3. Multifiber beams and  
 strain localization -- 5.2.4. Enriched multifiber description and use of  
 suitable parameters -- 5.2.5. Simulations based on the enriched  
 multifiber description -- 5.3. Multifiber calculations and access to  
 cracking indicators -- 5.3.1. Damage fields -- 5.3.2. Opening of cracks  
 -- Chapter 6. Modeling of Situations Related to Specific Loadings --  
 6.1. Simulation of velocity effects -- 6.1.1. Analysis resulting from the  
 experiment -- 6.1.2. High-velocity loading: application to Spalling  
 tests -- 6.1.3. Loading at medium velocity: impact on a reinforced  
 concrete beam -- 6.2. Simulation of the effects of concrete maturation  
 -- 6.2.1. Problems posed by the behavior of concrete at an early age --  
 6.2.2. Case of a beam in a situation of restrained shrinkage -- 6.2.3.  
 Thermomechanical model of concrete at an early age -- 6.2.4. RG8  
 test: application and results -- Chapter 7. Structures Combining Beams  
 and Planar Elements -- 7.1. Simulation of the behavior of a reinforced  
 concrete wall -- 7.1.1. Model for structural walls: equivalent reinforced  
 concrete -- 7.1.2. Application to the SAFE experiment shear wall case  
 -- 7.2. Application to a structure combining walls, beams and columns  
 -- 7.2.1. Enriched ERC modeling -- 7.2.2. Modeling the response of  
 the SMART model -- 7.3. Calculation combining 2D finite elements and  
 multifiber beams -- 7.3.1. Case study: loss of bearing capacity of a  
 column in a structure.  
 7.3.2. Calculation-experiment comparison results -- 7.4. Conclusion  
 -- Chapter 8. Assessment of Cracking by Limit Analysis -- 8.1.  
 Characterization of cracking: case of homogeneous fields of tensile  
 elements -- 8.1.1. Limit analysis and yield design theory -- 8.1.2. Case  
 of reinforced concrete beams in bending -- 8.2. Tie rod cracking --  
 8.2.1. Localized cracking and diffuse damage -- 8.2.2. Behavioral law  
 for concrete in the diffuse scheme -- 8.2.3. Application to an  
 experiment on tie rods carried out at EPFL -- 8.3. Homogeneous field  
 created by concrete maturation within a cylindrical wall -- 8.3.1.  
 VeRCoRs program and model -- 8.3.2. Mesh of the gusset and  
 temperature conditions -- 8.3.3. Creep, shrinkage and mechanical  
 properties -- 8.3.4. Mechanical calculation -- 8.3.5. Principal results  
 and comparisons with in situ measurements -- 8.4. Conclusion --  
 Chapter 9. Exercises and Supplements -- 9.1. Determining mechanical  
 characteristics from experimental curves -- 9.2. Mazars model:  
 axisymmetric triaxial loading under compression -- 9.3. Local and  
 non-local damage -- 9.3.1. Example of a concrete bar under direct  
 tension -- 9.3.2. Local model response: impact of the number of  
 elements -- 9.3.3. Non-local damage problem -- 9.3.4. Objective  
 calculation with a local model: Hillerborg method -- 9.3.5. Conclusion  
 -- 9.4. On the  $\dot{\epsilon}$  model -- 9.4.1. Reaching the damage threshold, load-  
 unload criterion -- 9.4.2. On the stress triaxiality factor -- 9.4.3.  
 Response to triaxial axisymmetric compression loading -- 9.5. On the

restraint degree  $R$  in situations of restrained shrinkage -- 9.6. Solving a simple structure using the PVP\* -- 9.6.1. Problem position -- 9.6.2. Using PVP\* (assembling the contributions of the elements): preliminary comments for solving -- Appendix: Prerequisites in Solid Mechanics and Finite Element Methods -- References -- Index -- EULA.
